**Reid Select
Black Thermoplastic
Soft Touch
Zinc Plated Steel Insert
Inch**

These "soft touch" knobs offer unique styling, rugged construction along with a soft feel. They are molded with a soft thermoplastic rubber shell around a tough thermoplastic body. The soft feel of the knurling provides a sure grip and a rich, pleasant touch.

These press-on knobs hold securely without threads or set screws. Knob is held in place with a ribbed insert that squeezes onto the shaft. Simply pound or press onto the shaft. Eliminates machining costs. Knobs won't come off under normal use, however, they can be removed by pounding on the underside with a hammer. Shaft diameter should be +.000/- .003 of size for best fit.

KNOBS - METAL & VISUAL DETECTABLE

ELESA
Metal Detectable Technopolymer
 Stainless Steel / Metric
 3-Lobed/Knurled

This knob contains iron oxide powder for the detectability of the plastic material by means of a metal detector.

Standard components are crafted using specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts and are suitable for contact with food (FDA CFR.21 and EU 10/2011). A special additive used in manufacturing the plastic allows for the detection of cubic particles measuring 5 mm by means of a metal detector. The specific and unique quality of the blue color used is naturally absent in the environment in which these components are applied, allowing for easy visual detection of contaminant parts. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Metal Detectable
 Specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts

Part #	Description
EHP-5MD	M8 X 10 mm thread. 304 Stainless steel boss, threaded blind hole
EHP-10MD	M10 X 13 mm thread. 304 Stainless steel boss, threaded blind hole
EHP-15MD	M8 X 20 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-20MD	M8 X 30 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-25MD	M10 X 30 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-30MD	M10 X 40 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-35MD	M5 X 10 mm thread. 304 stainless steel boss, threaded blind hole.
EHP-40MD	M8 X 15 mm thread. 304 stainless steel boss, threaded blind hole.

Ideal for Food and Pharmaceutical Equipment

ELESA
Visual Detectable Technopolymer
 3-Lobed/Knurled

Standard components are made of "Signal blue" (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts. This shade of blue is easily detectable and recognizable to the human eye thanks to the specified nature of the color and the fact that it is naturally absent in the environment in which these components are used. The material is suitable for contact with food (FDA CFR.21 and EU 10/2011) and is in full compliance with international regulations, contributing to increased levels of safety in food production processes wherever applied. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Visual Detectable
 Made of "Signal blue" (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts.

Part #	Description
EHP-5VD	M8 X 10 mm thread. 304 Stainless steel boss, threaded blind hole
EHP-10VD	M10 X 13 mm thread. 304 Stainless steel boss, threaded blind hole
EHP-15VD	M8 X 20 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-20VD	M8 X 30 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-25VD	M10 X 30 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-30VD	M10 X 40 mm thread. 304 Stainless steel threaded stud, chamfered flat end
EHP-35VD	M5 X 10 mm thread. 304 stainless steel boss, threaded blind hole.

KNOB, HANDLES & HAND WHEELS

LOBED / ARM / PRONG / STAR KNOBS

These knobs are made of thermoplastic with a black matte finish. There are no cavities. Recommended for use in the food processing industry, as no contaminants can collect. Knobs are durable. They will not chip or crack and are resistant to high temperatures making them an excellent choice for lighting equipment, machinery, etc.

Black Polypropylene
Five Lobed Thru Hole
Steel Insert with Knob-Lok
Inch

Unique Knob-Lok features a nylon locking element that resists vibration and prevents back off. It also allows for consistent installation torque and precise adjustments. No tools needed for safe and sure fastening.

LOBED / ARM / PRONG / STAR KNOBS

These "soft touch" knobs offer unique styling and rugged construction along with a soft feel. They are molded with a soft thermoplastic rubber shell around a tough thermoplastic body. The soft feel of the knurling provides a sure grip and a rich, pleasant touch.

Jergens

Reid Supply is a Full-Line Supplier of Jergens Products

Jergens, founded in 1942, is one of the world's largest manufacturers of standardized tooling components, such as vises, handles, and other workholding equipment. Jergens is known for precision applications due to their consistent quality standards to help customers achieve more efficient manufacturing processes.

KCFI-2410	40 mm	THERMOPLASTIC	M8
KCFI-2415	50 mm	THERMOPLASTIC	M10
KCFI-2420	63 mm	THERMOPLASTIC	M12
KCFI-2425	32 mm	THERMOPLASTIC	M6
KCFI-2430	40 mm	THERMOPLASTIC	M8
KCFI-2435	50 mm	THERMOPLASTIC	M10
KCFI-2440	63 mm	THERMOPLASTIC	M12

Clamping force
can be doubled
vs. standard
clamping knobs

Star grips with integrated clamping force intensifier can achieve double the clamping force compared to standard star grips.

Furthermore, this product can also be used by persons with limited hand strength (e.g. in rehabilitation) to achieve comparable clamping forces with less effort. Less effort is also needed to loosen the star grip.

KIPP Clamping Intensifiers Threaded Stud - Star Grip

Black Thermoplastic
Soft-Touch Oval and Tapered
Zinc Plated Brass Insert
Inch

These "soft touch" knobs offer unique styling, rugged construction along with a soft feel. They are molded with a soft thermoplastic rubber shell around a tough thermoplastic body. The soft feel of the knurling provides a sure grip and a rich, pleasant touch.

KNOBBS, HANDLES & HAND WHEELS

PUSH-PULL KNOBS

Push-pull knobs feature tapered shanks and enlarged heads to provide good finger clearance and excellent grasp for pulling or lifting. Top surfaces make them equally good for pushing functions. Popular applications include push-pull rods, palm switch knobs, lid knobs, palm grasp knobs for portable power tools, push buttons and drawer pulls.

Inch and Metric

These press-on knobs hold securely without threads or set screws. Knob is held in place with a ribbed insert that squeezes onto the shaft. Simply pound or press onto the shaft. Eliminates machining costs. Knobs won't come off under normal use, however, they can be removed by pounding on the underside with a hammer. Shaft diameter should be +.000/-.003 of size for best fit.

TAPERED KNOBS - METAL AND VISUAL DETECTABLE

ELESA
Metal Detectable Technopolymer
Stainless Steel / Metric
Tapered Handles

Metal Detectable
 Specially formulated “Green-blue” (RAL 5001) technopolymer with AISI 304 stainless steel inserts

This cylindrical handle contains iron oxide powder for the detectability of the plastic material by means of a metal detector. M10 thread. Threaded blind hole.

Standard components are crafted using specially formulated “Green-blue” (RAL 5001) technopolymer with AISI 304 stainless steel inserts and are suitable for contact with food (FDA CFR.21 and EU 10/2011). A special additive used in manufacturing the plastic allows for the detection of cubic particles measuring 5 mm by means of a metal detector. The specific and unique quality of the blue color used is naturally absent in the environment in which these components are applied, allowing for easy visual detection of contaminant parts. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Part #	Description
EHP-55MD	CYLINDRICAL HANDLE M10 METAL DETECTABLE

Ideal for Food and Pharmaceutical Equipment

ELESA
Visual Detectable Technopolymer
Tapered Handles

Visual Detectable
 Made of “Signal blue” (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts.

Standard components are made of “Signal blue” (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts. This shade of blue is easily detectable and recognizable to the human eye thanks to the specified nature of the color and the fact that it is naturally absent in the environment in which these components are used. The material is suitable for contact with food (FDA CFR.21 and EU 10/2011) and is in full compliance with international regulations, contributing to increased levels of safety in food production processes wherever applied. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

This tapered handle shade of blue is easily recognizable to the human eye. Plastic material is suitable for contact with food and is ideal for food and pharmaceutical equipment.

KNOBS, HANDLES & HAND WHEELS

ADJUSTABLE CAM LEVERS

Adjustable cam lever handles are just like the original cam lever except that the threaded stud can be adjusted with a flat head screwdriver. This allows the handle to be in the optimum position at all times.

OPTION AVAILABLE

ADJUSTABLE CAM LEVERS

Cam lever handles allow for quick fastening and unfastening without the use of tools. They thread in like a regular fastener but for the final clamp action the cam handle is simply pushed downward. They are constructed of cast aluminum and the washer is fiberglass reinforced plastic.

ADJUSTABLE HANDLES / METAL & VISUAL DETECTABLE

ELESA
Metal Detectable Technopolymer
Stainless Steel / Metric
Adjustable Handles

This adjustable handle contains iron oxide powder for the detectability of the plastic material by means of a metal detector.

Standard components are crafted using specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts and are suitable for contact with food (FDA CFR.21 and EU 10/2011). A special additive used in manufacturing the plastic allows for the detection of cubic particles measuring 5 mm by means of a metal detector. The specific and unique quality of the blue color used is naturally absent in the environment in which these components are applied, allowing for easy visual detection of contaminant parts. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Metal Detectable
Specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts

Part #	
EHP-60MD	M6 X 38.5 mm thread. 303 stainless steel threaded hole.
EHP-65MD	M8 X 45 mm thread. 303 stainless steel threaded hole.
EHP-70MD	M6 X 16 mm thread. 303 stainless steel threaded stud.
EHP-75MD	M6 X 25 mm thread. 303 stainless steel threaded stud.
EHP-80MD	M8 X 20 mm thread. 303 stainless steel threaded stud.
EHP-85MD	M8 X 40 mm thread. 303 stainless steel threaded stud.

Ideal for Food and Pharmaceutical Equipment

ELESA
Visual Detectable Technopolymer
Adjustable Handles

Standard components are made of "Signal blue" (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts. This shade of blue is easily detectable and recognizable to the human eye thanks to the specified nature of the color and the fact that it is naturally absent in the environment in which these components are used. The material is suitable for contact with food (FDA CFR.21 and EU 10/2011) and is in full compliance with international regulations, contributing to increased levels of safety in food production processes wherever applied. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Visual Detectable
Made of "Signal blue" (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts.

Part #	
EHP-60VD	M6 X 38.5 mm thread. 303 stainless steel threaded hole.
EHP-65VD	M8 X 45 mm thread. 303 stainless steel threaded hole.
EHP-70VD	M6 X 16 mm thread. 303 stainless steel threaded stud.
EHP-75VD	M6 X 25 mm thread. 303 stainless steel threaded stud.
EHP-80VD	M8 X 20 mm thread. 303 stainless steel threaded stud.
EHP-85VD	M8 X 40 mm thread. 303 stainless steel threaded stud.

Steel Insert
Inch and Metric

These adjustable handles act as a standard lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way.

ADJUSTABLE HANDLES

KIPP
Powder Coated Steel
Straight Adjustable Handle
Stainless Steel Insert
Inch and Metric

These adjustable handles act as a standard lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way.

ADJUSTABLE HANDLES

These adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of steel.

ADJUSTABLE HANDLES

These adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made from Type 303 stainless steel. Zinc lever is finished in a tough chip and peel resistant powder coating for use in food industry or where corrosion is a problem.

KNOBS, HANDLES & HAND WHEELS

ADJUSTABLE HANDLES

Size 0 adjustable handles are the smallest adjustable handles on the market. These are perfect for clamping in tight or restricted areas. Available in black or orange handles with steel or stainless steel components.

ADJUSTABLE HANDLES

Adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of steel.

KNOBS, HANDLES & HAND WHEELS

ADJUSTABLE HANDLES

Adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of stainless steel.

ADJUSTABLE HANDLES

Adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of steel.

KNOBBS, HANDLES & HAND WHEELS

ADJUSTABLE HANDLES

Adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of steel.

KNOBBS, HANDLES & HAND WHEELS

ADJUSTABLE HANDLES

Adjustable handles act as a standard clamping lever, yet can adjust to 16-26 positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening. Allows for convenient positioning for maximum leverage, as well as saving space and keeping the handle out of the way. Plastic handles are reinforced with fiberglass for added strength. Insert, stud and other components are made of steel.

ADJUSTABLE HANDLES

These adjustable handles act as a standard clamping lever, yet can adjust to several positions depending on the size. Pulling up on the handle disengages it, while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle reengages it for tightening and loosening.

ADJUSTABLE HANDLES

These adjustable handles act as a standard clamping lever, yet can adjust to 20-45 positions depending on the size. Pulling up on the handle disengages it while the insert or stud remains stationary, allowing you to adjust the handle to the desired position. Releasing the handle engages it for tightening and loosening. Allows for convenient positioning for maximum leverage as well as saving space and keeping the handle out of the way. Black plastic handle bodies are reinforced with fiberglass for added strength. Gripping portion of handles are gray "soft touch" thermoplastic. Insert, stud and other components are made of steel.

CLAMPING INTENSIFIER HANDLES

KIPP Clamping Intensifier Handles Plastic Handle, Steel Component

By using clamping levers with integrated clamping force intensifier, the clamping force can be increased by up to 75% compared to standard clamping levers.

Furthermore, this product can also be used by persons with limited hand strength (e.g. in rehabilitation) to achieve comparable clamping forces with less effort. Less effort is also needed to loosen the clamping lever.

ADJUSTABLE HANDLES

These adjustable handles act as a standard clamping lever, yet can adjust to several positions depending on the size. Releasing the handle reengages it for tightening and loosening. Moreover, the chrome plating makes the surface finish glossy and homogeneous to facilitate cleaning operations. This adjustable handle is particularly suitable for outdoor environments subject to unfavorable weather conditions, and in general for applications on machines and equipment whose parts need frequent cleaning cycles for hygienic reasons.

Morton Machine Works
Black Thermoplastic or Die Cast Zinc
Thru-Hole
Inch

Push button to disengage threads

Slide handle to new position

Release button and threads engage for clamping

The thru-hole allows for quick clamping. Ideal for repetitive tightening operations. The handles are available in black thermoplastic or die cast zinc. Internal thread mechanism is made from carbon steel.

KNOBS, HANDLES & HAND WHEELS

ADJUSTABLE TENSION LEVERS

Steel are cold finished with black oxide finish and black plastic knob. Stainless steel handle is type 303. Available in single or double handle, offset or straight types. Can be supplied as blanks, tapped or reamed, or can be machined as required to your specifications. By loosening the set screw on the straight type, handles can be shifted off center to provide additional leverage. Welded construction permits hole to be tapped or reamed the full length of body.

BRIDGE HANDLES / METAL & VISUAL DETECTABLE

ELESA
Metal Detectable Technopolymer
Stainless Steel / Metric
Bridge Handles

This bridge handle contains iron oxide powder for the detectability of the plastic material by means of a metal detector.

Standard components are crafted using specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts and are suitable for contact with food (FDA CFR.21 and EU 10/2011). A special additive used in manufacturing the plastic allows for the detection of cubic particles measuring 5 mm by means of a metal detector. The specific and unique quality of the blue color used is naturally absent in the environment in which these components are applied, allowing for easy visual detection of contaminant parts. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

Ideal for Food and Pharmaceutical Equipment

Metal Detectable
Specially formulated "Green-blue" (RAL 5001) technopolymer with AISI 304 stainless steel inserts

Part #	DESCRIPTION
EHP-45MD	M8 X 13 mm thread. 303 stainless steel threaded hole.
EHP-50MD	M8 X 13 mm thread. 303 stainless steel threaded hole.

ELESA
Visual Detectable Technopolymer
Bridge Handles

Standard components are made of "Signal blue" (RAL 5005) technopolymer and crafted using AISI 304 stainless steel inserts. This shade of blue is easily detectable and recognizable to the human eye thanks to the specified nature of the color and the fact that it is naturally absent in the environment in which these components are used. The material is suitable for contact with food (FDA CFR.21 and EU 10/2011) and is in full compliance with international regulations, contributing to increased levels of safety in food production processes wherever applied. Compliance with FDA regulations affords an additional, higher level of protection, preventing against the risk of contamination.

This bridge handle shade of blue is easily recognizable to the human eye. Plastic material is suitable for contact with food and is ideal for food and pharmaceutical equipment

CRANK HANDLES

Carbon Steel Forged Solid Handle Inch

Unfinished

Broached

Finished

Made from C1018 carbon steel. Unfinished are plain forgings without hole in hub. Broached have holes finished and hubs recessed or counterbored in free end, but are otherwise plain forgings. Finished are broached, counterbored in free end of hub, polished, and black plastic powder coated. The broached openings are made with corners slightly rounded to prevent breakage and a slight clearance is provided.

Carbon Steel Malleable Revolving Handle Inch

Unfinished

Finished

Supplied either completely finished, unfinished or blank. Blank unfinished are plain malleable cranks without hole in hub and with chrome plated steel handle. Finished are broached, counter-bored in free end of hub, lifetime luster aluminum baked finish and with chrome plated steel handle. Broached openings have corners slightly rounded to prevent breakage with a slight clearance provided.

ESD-C (Electrostatic Discharge Conductive)
Metric

elesa

The special conductive technopolymer ESD-C (Electrostatic Discharge Conductive) prevents the transfer of electrostatic discharge between bodies with different electric potential. These handles are suitable for ESD Protected Areas (EPA), where components are susceptible to electrostatic discharge, are to be handled with the minimum risk of damage. The indelibly printed mark (ESD-C) on the surface of the handle identifies the particular anti-static feature in accordance with EN 1000 15 / 1 and IEC 61340-5-1.

KIPP Big Handles

The newly designed Bighand tubular handle with its ergonomic oval shape and selected tube size provides a secure and comfortable grip. Its timeless elegant design makes it attractive and the variable color scheme means it can be optimally adapted to its surroundings.

Material:

Oval tube aluminum.
End piece thermoplastic polyamide.
End cap thermoplastic polyamide.
Adapter bushing stainless steel.

Temperature range:

Permanent temperature max. 100 °C.
Short time use up to 180 °C.

Black Discomatic Dished
Without Handle or With Revolving Fold-Away Handle
Inch

With Revolving Fold-Away Handle

Without Handle

Revolving handle folds away automatically when not in use. Smooth, spokeless web with no hazardous openings. Finger-grip rim design for minimum slippage. Strong, tough, chemical resistant coating provides good gripping surface. Dished design for more distance between rim and possible machine cabinet pinch-points. The revolving handle has a highly polished aluminum grip with a clear, anodized finish for durability. Spindle is made of steel and packed with grease to last the life of the hand wheel.

JW Winco
Aluminum - Matte Black or Silver Textured Finish
Flat-Faced Solid Disk
With or Without Revolving Handle
Inch

These flat-faced solid disk hand wheels are distinguished by their modern design. The removable plastic cover shrouds the assembly hardware such as screws and countersunk washers, as well as the shaft end. The hand wheel body is made of aluminum, pressure die-cast with powder coated matte black finish or silver textured finish. The rim is concentric and square to bore. The revolving handle is black nylon plastic with zinc plated steel threaded spindle. There is no mounting hole in the rim for hand wheels without a handle.

POSITION INDICATORS

Cast Aluminum
Fluted, Round with Handle, Spoked
Inch

Fluted

Round with Handle

Spoked

Indicating hand wheels accurately display the position of a control shaft on even the latest and most sophisticated machines. These indicators give precise settings and enable the operator to return to these exact settings without guess work. Only applicable to stems and shafts placed in a horizontal position. Hand wheel and indicator are sold as one unit. Hand wheels are cast aluminum with black powder coat. Indicator case is solid metal construction with celluloid crystal cover. Dial faces available with numbers reading clockwise or counterclockwise. Dial has two pointers, one indicates whole turns up to 12 and the other indicates the proportion of the turn. Available in three styles, fluted, round with handle or spoked with either counter clockwise or clockwise rotation. All are bored with set screws.

Mounts on control spindles in any position for giving actual reading of the positioning of the machine component. Four figure digital counter with clockwise and counter clockwise rotation available in various standard ratios. High impact resistant, orange plastic case, sealed to prevent tampering and dust penetration. Resistant to solvents, oils, grease and other chemical agents. Black oxide steel inserts. Rear torque pin for positioning. Rear rubber gasket. Socket head grub screw for fitting to the shaft.

Plastic Housing

Metal Housing

Easily mounts on all types of machinery and equipment where there is an adjusting hand wheel or crank. Ideal for packaging, woodworking, textile, printing, and converting machines. Reduces setup time and allows repeatable manual position changes and settings. Provides exact, incremental position readings on manually adjusted control shafts or spindles from a fraction of a turn to multiple turns. Sealed to prevent cover separation and dust free operation. Steel black oxide shaft collar and "positive drive" internal gear mechanism for smooth, exact operation. Available in either injection molded plastic housing or heavy duty metal housing. Five digit counter with clockwise and counter-clockwise rotation available in various standard ratios. Rear foam mounting gasket included. Fastens on to shaft with set screw. Made in the U.S.A.

VERTICAL SWING & HOLD DOWN CLAMPS

DESTACO Series TC-6004 SWL/SWR

- Left or right swing motion available
- 90° Swing clamp arm motion
- Higher clamping force than pneumatic version
- Though-hole mounting
- Clamp arm can be radially positioned 360°
- Handle can be radially positioned up to 180°

Applications:

- Assembly
- Checking fixtures
- Welding fixtures
- Tensioning devices

DESTACO Series TC-2002, 2007, 2010

Now you can save valuable space in all your applications without sacrificing holding capacity or clamp performance. The open "U" bar has a knob on the end to prevent the spindle from slipping off the end of the arm. Unique design delivers greater hand clearance in the open position, eliminating pinch points and improving safety and ergonomics. Clamp comes complete with ergonomic handle grip, two flanged washers and spindle assembly ("U" bar models only). All "S" bar models supplied with bolt retainer.

VERTICAL HANDLE HOLD DOWN CLAMPS

DESTACO Series TC-2002R, 2007R, 2010R Toggle Lock Plus

Designed with maximum safety and ergonomic benefits as its foundation, these Toggle Lock Plus clamps offer many outstanding features, including:

- Bushings at major pivot points for longer life
- Stop point locations at the base for added durability
- Greater hand clearance for ease of use
- Elimination of pinch points for added safety
- Extended handle length for improved ergonomics
- Longer clamping arm for greater flexibility
- Spindle contacts workpiece in vertical position for less workpiece marring or movement
- Clamping arm completely clears workpiece for easy load/unload
- Keeps part locked in place in closed position and keeps the clamp from falling back down while in open position

Straight Base

DESTACO Cam Action Clamps

Automatically compensates for variations in part thickness. A high to low limit clamping range allows for normal part size variation and eliminates adjustments. Normalized cast steel construction for heavy duty use. Fast, one hand operation. Cam action resists vibration loosening. Accommodates from 1/8" to 1/4" part size variation.

KAC-10	K0020.40	Steel, Thermoplastic					Left Hand/ Thrust
KAC-11	K0020.45	Steel, Thermoplastic					Left Hand/ Pull

The Actima clamping device is self-locking and designed for smooth, precise clamping that is both repeatable and very forceful. It can be used for thrust or tension clamping, and is ideal to build into clamping fixtures, such as a teeter-totter. The clamping plunger of every Actima clamp has a travel of 12 mm.

Reid Supply offers left hand and right hand thrust and pull Actima handles along with a variety of mounting hardware and accessories for toggle clamps of all diameters and latching applications

HORIZONTAL HOLD-DOWN CLAMPS

Bessey® Horizontal Hold-Down Clamps

Auto-Adjust - The Bessey auto-adjust toggle clamp automatically adjusts to variations in work piece dimensions while maintaining constant clamping force. No more time-consuming manual adjustment of the spindle height to maintain safe and correct clamping force. The removable non-marring plastic cap is included on the $\frac{7}{8}$ " diameter pads.

Adjusting Clamping Force - The integrated clamping force adjustment screw can be used to create an actually applied clamping force from 25 to 550 lbs. (max holding capacity 700 lbs.) One Bessey auto -adjust toggle clamp can replace a range of competitive clamps.

Adaptable Base Plate - The large (2 1/4" x 2 1/2") flange base is designed for use with 1/4" or M6 fasteners. Mounting holes are sized and spaced for easy mounting and versatility.

Extra Large Handle - The large 1" x 2 1/8" handle offers greater user comfort and ease of operation.

Item No.	A	B	C	D	E	G	Opening	Clamping Force Range	Holding Cap. Lbs.
STC-HH50	1.79	.84	8.25	1.00	1.52	2.24	2.00	25-550	700
STC-HH70	2.50	1.54	8.25	1.00	1.52	2.24	2.75	25-550	700

Note: Clamping force range is variable and dependent on spindle settings, pressure screw setting, force applied, etc.

DESTACO Series TC-5305, 5310

Color Code Your Work Area With Destaco Colored Handle Grips!

DESTACO has a collection of colored manual clamp handles.
Now available with **5 handle colors**.

The range of colors can be used for:

- Implementing safety aspects using standardized color codes.
- Company branding
- Color code for different operations
- Designate specific handles for specialized uses
- Create standardized color codes for different operations

*The colored handles can be ordered on all models within the series listed, except for dipped handle.

DESTACO Vertical Pull-Action Latch Clamps Series TC-324-R, 334-R, 344-R

Features:

- Ergonomic thumb controlled locking lever
- Over-center toggle lock mechanism
- Durable carbon steel construction
- Locks to base

Applications: Ideal for quick clamping for the closure of covers and flaps on rotating or stationary containers, drums, boxes and molds— or any application where the possibility of unintentional opening exists due to vibration or abrupt movement.

Application Examples

This **Model 341-SS** is used here to provide a push action on conveyor take-up for quick tear down.

Model 351 safely secures equipment on this rescue vehicle, allowing fast access to vital equipment.

This modified (handle) **Model 311** provides quick and secure clamping of mold halves. This enables the mold to be opened much faster than with traditional fastening systems.

Model 351 makes for an ideal closure system for this vibratory finishing machine.

Stainless steel versions of DE-STA-CO toggle clamps are used often on stainless equipment. **Model 324-SS** shown here securing an access door.

Model 323 used for a vessel closure

Model 374 (modified) used for a vessel closure

We have access to Destaco engineers and support to help you find solutions to your application.

Potential application for latch clamps

STRAIGHT-LINE ACTION CLAMPS

DESTACO Series TC-601, 6001

STAINLESS STEEL OPTION AVAILABLE

Smallest of the straight-line toggle clamps. Ideal for electronic applications and similar small fixturing. TC-601 has an 8-32 nylon spindle (TC-105203). TC-601-SS has an 8-32 stainless steel spindle (TC-205943). TC-601-0 and TC-601-0SS have externally threaded 1/4-20 plunger tips. TC-601-M has a M4 internal thread. TC-6001-M and TC-6001-SS are heavier duty versions and has 50% greater holding capacity. It is manufactured from heavy gauge material and has a more flexible mounting base to enable side-mounting the clamp. TC-6001-M has a M4 internal thread. TC-6001-SS has a 8-32 internal thread.

DESTACO Series TC-602, 604, 624

STAINLESS STEEL OPTION AVAILABLE

Fully retractable straight line action clamps mount directly through a member by a jam nut on the work side, or flush by drilling and tapping the member. Locks over-center in extended or retracted position. When flush mounted, plunger completely retracts from work area. An optional base mounting is available for TC-604 as TC-604106, and for TC-624 as TC-624108.

STRAIGHT-LINE ACTION CLAMPS

Bessey® Inline Toggle Clamp Auto-Adjust

Auto-Adjust - The Bessey auto-adjust toggle clamp automatically adjusts to variations in work piece dimensions while maintaining constant clamping force. No more time-consuming manual adjustment of the spindle height to maintain safe and correct clamping force. The removable non-marring plastic cap is included on the 7/8" diameter pads.

Adjusting Clamping Force - The integrated clamping force adjustment screw can be used to create an actual applied clamping force from 25 to 550 lbs. (max holding capacity 700 lbs.) One Bessey auto -adjust toggle clamp can replace a range of competitive clamps.

Adaptable Base Plate - The large (2 1/4" x 2 1/2") flange base is designed for use with 1/4" or M6 fasteners. Mounting holes are sized and spaced for easy mounting and versatility.

Extra Large Handle - The large 1" x 2 1/8" handle offers greater user comfort and ease of operation.

Item No.	A	B	C	D	E	F	G	Opening	Clamping Force Range	Holding Cap. Lbs.
STC-IHH25	1.80	1.45	9.39	1.00	1.52	1.00	2.24	1.00	25-550	700

Note: Clamping force range is variable and dependent on spindle settings, pressure screw setting, force applied, etc.

DESTACO Clamp Accessories Bolt Retainers for Clamps with Solid Hold Down Bars

Item No.	Description
TC-207105	1.25 Bolt Retainer for 3/16 Spindle
TC-210114	1.50 Bolt Retainer for 3/8 Spindle
TC-247110	1.63 Bolt Retainer for 1/2 Spindle

Plunger-Matic Spindle Assembly For Straight-Line Clamps M8 Thread

Accessory for straight line action clamps. Internal compression spring compensates for variations in material thickness. Zinc plated. Includes jam nut. Manufacturer Part Number: 905-M

Item No.	Thread Size	Thread Length	Overall Length	Material
TC-905M	M8x1.25	.75"	2.50"	Steel

Color Code Your Work Area With Destaco Colored Handle Grips!

DESTACO has a collection of colored manual clamp handles. Now available with **5 handle colors**.

The range of colors can be used for:

- Implementing safety aspects using standardized color codes.
- Company branding
- Color code for different operations
- Designate specific handles for specialized uses
- Create standardized color codes for different operations

*The colored handles can be ordered on all models within the series listed, except for dipped handle.

PNEUMATIC HOLD-DOWN CLAMPS

DESTACO Pneumatic cylinders provides the activating force for these over-center toggle clamps. Built to perform repetitive production operations. Portable and economical for use on short run jobs with temporary fixturing. By adding a sensing switch, the position of the cylinder can be sensed. All these models come with magnetic ring for sensing capability.

Series TC-802-U

Type B

TC-802 provides 200 lbs. holding capacity in a package less than 7" long. Threaded spindle is adjustable to accommodate work piece height and is neoprene tipped for part protection. Double acting power cylinder has built-in speed control (restriction) and needs only to be hooked up to a controlled air or hydraulic power source. Hold down bar opens 95 degrees to facilitate easy part loading/unloading.

TC-802 provides 200 lbs. holding capacity in a package less than 7" long. Threaded spindle is adjustable to accommodate work piece height and is neoprene tipped for part protection. Double acting power cylinder has built-in speed control (restriction) and needs only to be hooked up to a controlled air or hydraulic power source. Hold down bar opens 95 degrees to facilitate easy part loading/unloading.

Series TC-807

Type C

Two versions available. TC-807-S with solid steel hold-down bar and TC-807-U (illustrated) with U-bar. TC-807-S is furnished with a separate bolt retainer which can be welded onto the hold-down bar (bar can be cut or modified). TC-807-U is furnished with flanged washers. A wide range of spindles are available to suit your application. Bar opens 92 degrees.

Two versions available. TC-807-S with solid steel hold-down bar and TC-807-U (illustrated) with U-bar. TC-807-S is furnished with a separate bolt retainer which can be welded onto the hold-down bar (bar can be cut or modified). TC-807-U is furnished with flanged washers. A wide range of spindles are available to suit your application. Bar opens 92 degrees.

Series TC-810

Type E

Similar to Series 807 but larger and higher capacity. TC-810-S with solid bar and TC-810-U with U-bar. Bar opens 90 degrees. Accommodates any 3/8-16 spindle assembly (not included).

Series TC-812

Type A

Smallest of hold-down models, this miniature clamp is the power version of TC-201. The 10-32 spindle is adjustable for height and location along the bar. Cylinder has built in speed controls for smooth operation. Clamp and base are stainless steel. Bar opens 90 degrees. TC-812 uses the TC-810156 reed switch.

Series TC-846, 847

Type F

Type G

TC-846 is the pneumatic version of the TC-516. TC-847-S (solid bar) and TC-847-U have patented bar guide feature. This provides additional side support to the hold-down bar and allows a take-up adjustment to compensate for misalignment or wear. Other features are similar to preceding models. The hold-down bar opens 95 degrees. Accommodates any 1/2-13 spindle assembly (not included).

Series TC-858

Type H

Heavy-duty model uses forged alloy steel links and steel components machined to close tolerances. Base is a 1/2" thick steel plate. All pivot points have hardened bushings fitted with hardened steel pivot pins. The 1" x 1 3/8" steel hold-down bar may be cut, drilled, tapped or welded to adapt to application. Bar opens 92 degrees.

Heavy-duty model uses forged alloy steel links and steel components machined to close tolerances. Base is a 1/2" thick steel plate. All pivot points have hardened bushings fitted with hardened steel pivot pins.

Series TC-8021, 8071

Type D

Ideal for dirty environments such as spot and MIG welding. Similar to TC-802 and TC-807-U except the internal mechanism is totally enclosed. Stationary cylinder allows hard piping. Low and narrow mounting profile. U-bar opens 90 degrees. Comes with magnetic ring for sensing switches as a standard feature.

DESTACO Pneumatic cylinders provide the activating force for these over-center toggle clamps. Built to perform repetitive production operations. Portable and economical for use on short run jobs with temporary fixturing. By adding a sensing switch, the position of the cylinder can be sensed. All these models come with magnetic ring for sensing capability.

Pneumatic Hold-Down Clamps Series TC-817, 827, 868 - Right Angle

Used where space dictates such as rotary indexing tables and injection molding operations. Can also be used with the cylinder horizontal in which case the hold-down bar pulls back toward itself. All models can be mounted on the side of the fixture. TC-817-U and TC-817-S can also be top mounted.

Series TC-840, 841

Designed for high production applications, these pneumatic clamps offer exceptional clamping forces and holding capabilities. Does not require greater pressure to open than to close. The TC-840 and TC-841 have oval cylinders which allows them to be used in close quarters or they can be ganged together in multiple installations. The even numbered models feature a 180 degrees clamping arm which travels to an over-center locked position parallel (180 degrees) to the clamps center line. The corresponding odd numbered models have a 90 degrees arm. The angular locked position of both versions is precisely controlled by the hardened steel insert. The magnetic ring cylinders are used when there is a need to sense the open or closed position of the cylinder. Then by adding a tie rod mounted reed switch, the position of the cylinder can be sensed.

DESTACO Series TC-870, 871 Power Roller

These models use a roller and cam principle to enable clamping work of inconsistent thickness while still maintaining a locked condition. Modular units 2 1/8" square can stack together for minimum distance between clamping points. Four-way mounting surface for full mounting flexibility. Built-in pre-stop eliminates need to bottom out cylinder. Gives extra travel to automatically compensate for wear. Also permits arm to be machined accurately relative to mounting surface. TC-870-2 maximum opening is 112 degrees, cylinder stroke is 2 7/8". TC-871-2 maximum opening is 126 degrees, cylinder stroke is 2 7/8". The magnetic ring cylinders are used when there is a need to sense the open or closed position of the cylinder. By adding a tie rod mounted reed switch, the position of the cylinder can be sensed. All these models come with magnetic ring for sensing capability.

PNEUMATIC HOLD-DOWN CLAMPS

DESTACO Automation Power Clamps Series TC-81L Miniature Design

Clamping, holding, gripping and positioning of metal sheets and other parts in jigs and handling systems. Features compact design, long life cycle, high holding torques, two mounting areas (front and rear), and toggle action mechanism. These models can be quickly fitted with magnetic position sensors. Horizontal clamping arms have 120 degrees standard opening angle and the vertical clamping arms have 90 degrees standard opening angle.

Powered with compressed air max. 6 Bar
Operation with oil-free air is permissible

DESTACO Automation Power Clamps Series TC-82L With Hand Lever

Features:

- Lightweight aluminum design
- Enclosed model
- Contaminant resistant
- Compact design
- High holding torques
- Long life cycle

PNEUMATIC STRAIGHT-LINE ACTION CLAMPS

DESTACO Pneumatic Straight-Line Action Clamps

Type A

This compact plunger action clamp is less than 10" long but provides a holding capacity of up to 600 lbs. The 7/16" diameter plunger extends 3/4" to a locked position. The end of the plunger is drilled and tapped for a 5/16-18 spindle. Also available as a fully enclosed clamp (TC-8031).

Type B

The 5/8" dia. plunger travels forward 1 1/4" from an open to a closed and locked position. Plunger is drilled and tapped to accept a 3/8-16 spindle or to receive your custom fixture.

Type C

The largest of the straight-line actions, this model has a full 1" dia. plunger that extends 2" and goes into a mechanical lock. A 3/8" thick steel base provides rigidity and can be welded or bolted into position. Removable pivot pins permit easy removal of the plunger without demounting the entire unit.

DESTACO Pneumatic Straight-Line Action Clamps Series TC-8031 - Fully Enclosed

TC-8031 is the fully enclosed version of TC-803. It can be used in the harshest environments. Cylinder is sensor ready and the clamp can be hard piped.

Item No.	A	B	C	D	E	F	G	H	J	Plunger Travel	Plunger Thread	Port Size	Holding Cap. Lbs.

DESTACO Pneumatic Retractor Clamps Series TC-800

Operates on an ordinary shop line air (properly filtered and lubricated). Clamp arm completely retracts from the work area for ease in part loading/unloading. Model 800-E has an extended arm. Min. operating pressure is 70 psig.

Item No.	Type	A	B	C	D	E	F	G	H	I	J	K	L	M	N	P	Mtg. Holes	Input Pressure	Exerting Force
TC-800	A	1.63	4.81	2.72	.25	2.21	.25	3.13	1.19	.59	.19	.50	1/4 NPT	2.31	1.50	—	.26	70-150	850 - 1,500

Note: Use with pneumatic power only. 3-Way air valve required to power unit (single-acting, spring return).

PNEUMATIC SWING CLAMPS

90 degrees swing of clamping arm minimizes obstruction in the work space and makes loading and unloading of parts easy. Ideal for installations where hydraulic power is not suitable. These double acting clamps are intended for quick clamping. Made of aluminum, red anodized, with either a threaded body that permits three mounting options, or a block style mounting body. Available with or without arm. Separate arm options available below. TC-8015, 8016, 8115 and 8116 are supplied with a 10-32 hex head steel spindle (TC-305203). TC-8415 and 8416 are supplied with a 3/8-16 hex head spindle assembly (TC-485203-AL) and neoprene cap (TC-235110). TC-8215, 8216, 8315 and 8316 are supplied with a 3/8-16 hex head aluminum spindle (TC-485203-AL). **Swing Cylinder Rotation:** Frame of reference for specifying rotation is the clamp arm viewed from above during the clamping stroke. A right-hand unit rotates clockwise and then clamps down; a left-hand unit rotates counter-clockwise, and then clamps down.

HYDRAULIC POWER WORKHOLDING

DESTACO Hydraulic Cylindrical Swing Clamps

Features:

- Advanced seals and wipers utilize a special, highly wear-resistant construction for long cycle life and operation
- Triple track piston rod design for field adjustable swing direction
- Hardened and hard chrome plated piston rod for increased strength and wear resistance
- Advanced metal treated body for superior wear and corrosion resistance
- MRO interchange design
- Straight pull capacity 600 lbs. at max (TBSC-SA-475)
- Straight pull capacity 1,400 lbs. at max (TBSC-SA-1100, TBSC-SA-1100-R, TBSC-DA-1100, TBSC-DA-1100-R)
- Straight pull capacity 3,150 lbs. at max (TBSC-SA-2400, TBSC-SA-2400-R, TBSC-DA-2400, TBSC-DA-2400-R)

The premium threaded body swing/pull clamps are available in both single-acting and double-acting versions. They incorporate the latest hydraulic swing clamp technology. The top port design allows easy access for plumbing connections. They are available with 90 degree left- or right-hand rotation, or with guided straight pull. The breather port on single-acting models may be replaced with tubing for remote venting. The optional arms clamp securely to the piston rod to reduce fatigue and deflection. Arms may be easily modified or custom arms may be substituted.

HYDRAULIC POWER WORKHOLDING & ACCESSORIES

ENERPAC Hydraulic Cylindrical Swing Clamps

These swing cylinders rotate 90 degrees as they begin their stroke, continuing without rotation for the final clamping stroke. Cylinders can be changed to left swing, right swing or pull applications by loosening the bottom plug. All single acting cylinders come with a retract spring for single-acting operations. Max. psi 5,000. Body styles available are threaded with upper flange or non-threaded with lower or upper flange.

DESTACO Clamp Arm Extensions

- Do not exceed the maximum speed and pressure ratings for standard arms
- Do not use meter-out circuitry for controlling double-acting clamp speeds

Custom built arms of any length must clamp to the swing/pull clamp's piston rod in a manner similar to the arms or some derating of the clamp will be necessary. **IMPORTANT:** Any clamp using a modified or custom arm that is longer or heavier than standard arms must be derated to prevent internal damage.

HYDRAULIC POWER WORKHOLDING & ACCESSORIES

ENERPAC Clamp Arm Extensions

Clamp arms can be positioned and tightened without removing the swing cylinder from the fixture. Clamp arm design eliminates the use of a vise when securing to a plunger. Short arms have a tapped hole for buttons and toggle pads. Long arms can be shortened to desired length.

These swing cylinders rotate 90 degrees as they begin their stroke, continuing without rotation for the final clamping stroke. Cylinders can be changed to left swing, right swing, or pull applications by loosening the side plug and then rotating the plunger to a desired position. The VE-354 and VE-352 have a retract spring for single-acting operations. Clamp arm provided. Can be mounted with the built-in flange by securing the swinger to the top or bottom of a tooling plate or by screwing the threaded body into a mounting bracket.

CAM-EDGE & WEDGE CLAMPS

MITEE-BITE Hex Cam Edge Clamps

STAINLESS STEEL
OPTION AVAILABLE

The Mitee-Bite® clamping system combines strength, versatility and performance with economy and ease of use. Consisting of a cam action socket cap screw with a brass hex washer, set ups are simplified even for hard to hold parts. Its small size allows more parts per load on multiple series jobs. The low profile makes programming easier because there are no clamps to jump over. Fast to use (just 1/4 turn of screw loosens clamp) and no loose parts to set up each time. Economical- all six sides of the hex nut can be used. Available in six sizes for use on multiple part fixtures. Metric sizes are in millimeters. MB-10203 and MB-50207 are stainless steel.

MITEE-BITE Knife Cam Edge Clamps

Low profile, fast cam action. Hardened steel bites into workpiece for secure clamping for castings and rough cut stock. Follows contour of part for maximum contact.

Item No.	Sets	
	Thread Size	Qty.
MB-22584	3/8-16	8
MB-22588	1/2-13	8
MB-22592	5/8-11	4

MITEE-BITE Wedge Clamps

Compact and economical, uniforce® clamps enable you to fixture more parts on the machine table. The specially designed steel wedge spreads the clamping force uniformly on both sides of the aluminum channel. Minimizes tool changes. Ideal for clamping flat or round work pieces. Please note that these are sold in packages.

Item No.	A	B	C	D	E	F	Thread Size	Max. Spread	Holding Force Lbs.	Pack Qty.
MB-6025	.240	.250	.320	.210	.140	.250	2-56	.260	200	6

MB-6100	.980	1.000	1.250	.820	.500	1.000	5/16-18	1.050	2,000	4
MB-6150	1.470	1.500	1.875	1.215	.750	1.500	1/2-13	1.560	3,500	2

Note: A shallow slot a little wider than D dimension will insure clamp remains in line with workpiece. F is the distance needed between workpieces for clamp clearance. Drill and tap mounting hole on the center of F dimension.

WEDGE, EDGE & TOE CLAMPS

MITEE-BITE Machinable Wedge Clamps

The compact clamp is available with extra material on the clamping jaws so it can be machined to conform to the shape of your work piece, enabling you to fixture unusual applications easily. The specially designed steel wedge spreads the clamping force uniformly on both sides of the aluminum channel. A unique locking plate is provided to make the clamp rigid while machining the jaws to your specifications. Order one piece and you will receive one complete assembly with mounting screws and locking plate.

Item No.	A	B	C	D	E	F	G	H	I
MB-250	1.125	.50	.62	.42	.25	.18	.400	2-56	8-32
MB-750	1.50	.750	.94	.64	.38	.28	.625	6-32	1/4-20
MB-1000	2.00	1.000	1.25	.82	.50	.38	.810	6-32	5/16-18
MB-1500	3.00	1.500	1.87	1.87	.75	.62	1.20	10-32	1/2-13

Note: A is the distance needed between work pieces for clamp clearance, drill and tap mounting holes on the center of the A dimension. F dimension is the amount of machinable stock.

MITEE-BITE T-Slot Toe Clamps

A low profile cam action clamp with positive down force. This clamp is mounted in the T-slots of machine tables by sliding the clamp to the work piece and tightening the locking screw. Total distance of movement .100". Two clamping edges, smooth for machined surface, and serrated for rough cut material.

Item No.	T-Slot Size	Price Each	Item No.	T-Slot Size
MB-24128	9/16		MB-24168	1 1/16
MB-24148	5/8			

MITEE-BITE Compact Toe Clamps

Cam action, positive down force clamps can be used in series. Clamp base should be installed in a slot to retain location. Clamp base provides for higher clamping; height is determined by depth of slot. Mounting screws included.

Item No.	A	B	C	D	E	F	G	Total Distance of Movement	Key Size	Mounting Screw
MB-24106	1.70	.75	.50	1.00	.090	.75	.25	.050	9/16	5/16-18 x 3/4

MITEE-BITE Pitbull® Clamps

The Pitbull clamp is a revolutionary new fixture clamp with positive down force and a low gripping profile. High vertical and horizontal clamping forces are generated, considering the size of the Pitbull Clamps. It uses a standard cap screw and an oil resistant O-ring. The Pitbull Clamp is available in 5 sizes and several styles, a tool steel knife edge for aggressive stock removal, a tool steel blunt edge for general purpose and a brass version to help prevent marring in the work piece.

Item No.	Material/Edge	A	B	C	Screw Size	Max. Holding Force Lbs.	Total Throw	Pack Qty.
PBCL-2	Steel/Blunt	.150	.140	.375	4-40	650	.0075	8
PBCL-3	Brass/Blunt	.150	.140	.375	4-40	650	.0075	8
PBCL-4	Steel/Knife	.200	.187	.500	8-32	1,500	.0160	8
PBCL-5	Steel/Blunt	.200	.187	.500	8-32	1,500	.0160	8
PBCL-6	Brass/Blunt	.200	.187	.500	8-32	1,500	.0160	8
PBCL-7	Steel/Knife	.300	.280	.750	1/4-20	3,600	.0240	6
PBCL-8	Steel/Blunt	.300	.280	.750	1/4-20	3,600	.0240	6
PBCL-9	Brass/Blunt	.300	.280	.750	1/4-20	3,600	.0240	6

These hardened and ground clamps can produce holding forces of over 19,000 lbs. The OK-Vise clamp achieves this by its cross-wedge construction, which allows the clamp to lock firmly in every direction as it is tightened down. Jaws with 30-34 HRC can be machined to suit the geometry of the workpiece. Includes mounting screws.

MITEE-BITE Machinable Pitbull® Clamps

This new Pitbull fixture clamp is a machinable version of the popular Pitbull clamp. The clamp has positive down force and a very low gripping profile. The machinable Pitbull clamp is made of tool steel and heat treated to about 43 Rc for long life, yet still machinable. There is additional material on the clamping face to allow for machining a radius. A dowel pin is included in each package to locate the clamp during the machining process.

Item No.	Description	A	B	C	D	E	Clamp Width	Screw Size	Max. Holding Force Lbs.	Torque In-Lbs.	Total Throw	Dowel Pin Size	Pack Qty.
MB-26077	Tool Steel, Machinable	.400	.450	1.00	.250	.710	1.00	3/8-16	6,000	360	.050	1/8	4

Note: D is clamp height.

MITEE-BITE Modular Pitbull® Clamps

The slotted modular Pitbull® clamp with a step offers increased versatility through its unique riser design. This clamp supports the work piece off the machine table for through milling and drilling. The hardened and ground clamps are designed for use on work cubes, as well as machined tables with tapped holes or T-slot configurations. The compact modular Pitbull® clamp is ideal for clamping work pieces in a series by using the back surface of a clamp to locate the next work piece. The back of the clamp is ground square to the bottom for precise location of parts. The height of the clamp can be adjusted by the depth of the milled slot used to locate the clamp.

Mitee-Bite Talon Grip vise jaws systems is a new and innovative product that will increase the versatility of your standard 4" and 6" vises. It is a simple bolt on system that will allow you to perform aggressive machining operations while clamping on as little as .060 of an inch. Ideal for small lot sizes, difficult application or prototype work when building a fixture would not be beneficial. TalonGrips are also available with the Pitbull clamp or soft jaw applications.

TalonGrip™ Vise Jaws Systems Steel Vise Jaw Set Set includes 4 TalonGrips™, 1 stop with M5 screws.

ID EXPANSION, EDGE & TOE CLAMPS

MITEE-BITE VersaGrip allows you the versatility of clamping standard vise work as well as providing a solution for difficult applications that would normally require fixturing or machining soft-jaws. By simply replacing your current jaws with the VersaGrip system you can securely hold odd shaped parts while machining at speeds and feeds you never thought possible. This system can accommodate a wide range of part sizes as well as holding multiple parts in a single cycle. The hardened (52-54 RC) VersaGrip has penetrating teeth designed to bite into your workpiece preventing lateral and horizontal movements. These grips will hold flame cut parts, castings, even parts with a negative draft.

MITEE-BITE ID Xpansion™ Clamps

Applications:

- Ideal for secondary operations on lathe parts
- Excellent for palletized setups

Features:

- Easily machined to size on lathe or mill
- Allows more parts per work cube or fixture plates
- Clamp body made of mild steel for machinability
- Tighten with hex key or hydraulic pull cylinders (drill clearance hole for longer bolt into cylinder)
- Three mounting screws included

These clamps are ideal to hold multiple parts on an inside diameter for machining on a machining center. These clamps are produced in ten sizes and can hold internal diameters from .16" to 4.06". Expand clamp approximately .005" over relaxed diameter and machine to fit work piece bore.

ID EXPANSION & SWING CLAMP ASSEMBLIES

MITEE-BITE Side-Loc Xpansion Clamps

Used for Milling

Used for Lathe

The side-loc xpansion clamp is an ideal way to clamp on the I.D. when the part has a blind bore. It is actuated by turning a socket head cam on the side, which moves a tapered plunger to expand the clamp. The side-loc xpansion clamp is designed in two styles, one for milling operations and one for lathe applications. Presently one size is available for each model. The mill side-loc xpansion clamp can be machined from 1.120 to .710 and the lathe version from 2.09 to .710. The lathe version has a straight mounting shank of 1".

Item No.	Used For	A	B	C	D	E	F	G	H	Hex Key Size	Holding Force Lbs.

MB-31370	Lathe	1.750	1.00	.84	.75	2.10	2.10	.71	1.0	M6	4,000

Note: Six mounting screws included.

Swing Clamp Assemblies Reamed Hole Mounting

Very useful in limited space applications. Knob swivel screw assembly allows for quick clamping and release and for protection against marring the work piece. The shoe of the swivel screw stops rotation upon contact with the work piece. To compensate for irregular work surfaces, the shoe swivels approximately three degrees in all directions. Arm may be used for right or left hand swing. Knob and arm are cadmium plated cast iron. All other parts are heat treated steel with black oxide finish.

DCK-8	5/8-11	3/4	TN-7	CS-7, CS-8, CS-9	1-S, 2-S, 3-S

Kit includes:

- Six T-slot nuts
- Twenty-four studs - four each of 3", 4", 5", 6", 7" and 8" lengths
- Four flange nuts
- Four coupling nuts
- Twelve step blocks
- Six step clamps
- One T-slot cleaner
- One metal stand

Powerful, low profile clamp that grips on the side of the work leaving the top surface open. No interference with cutting tools or reading and measuring instruments. Ideal for use on mills, planers, jig bores, drill presses or faceplates. Heat treated steel, black oxide finish. Toe is moved by an actuating screw. T-wrenches are sold separately. Toe moves on a 45 degree angle, forcing the workpiece down. 3 degree taper prevents back-off. To help prevent possible damage by the anchor screw, a special washer is provided with each clamp.

MACHINE STRAP CLAMPS & ACCESSORIES

Plain and Positive Grip Step Clamps

Plain Grip

Positive Grip

Machined from solid bar stock, case hardened and black oxide finish. When used in conjunction with step setup blocks, positive grip step clamps simplify and quicken setting up operations considerably. Eliminates shimming to obtain the right height.

Plain Item No.	Positive Item No.	Bolt Size	OAL	Width	Thickness	Slot Length
CP-1	CS-1	5/16 or 3/8	2 1/2	1	1/2	1 1/4
CP-2	CS-2	5/16 or 3/8	4	1	5/8	1 7/8
CP-3	CS-3	5/16 or 3/8	6	1 1/8	3/4	2 5/8

One Piece Adjustable Clamps

Forged steel clamp offers instant height adjustment without blocks or shims. One piece assembly allows quick setups. Removable brass shims protect machine table and work piece. Clamp swings 90 degrees in either direction for loading clearance.

Item No.	A	B	C	D	Stud Size	Clamping Range
USC-40	1 7/8	1 1/8	1	1 1/4	3/8	0-1 3/4

USC-70	3 1/2	2 1/8	2 1/4	2 5/8	3/4	0-4 1/4

Bessey® Rite Hite Self Positioning Hold Down Clamps

These clamps have instant adjustment up to 5". The main body of the clamp will move from 0" to whatever the max. height of the particular clamp is, instantly. Two models are available; longer reach for normal requirements and shorter reach where table space is at a premium. Up to 65,000 lbs. load limits. Clamps have a rocker design which allows for "instant set-ups" when held in place by a T-nut in a T-slot.

Item No.	Max. Stud Size	Clamping Range	Dimensions	Load Limit Lbs.

Strap Clamp Assemblies

Spherical washers compensate for irregularities between clamp strap and part being clamped allowing for more rigid clamping. Double end clamp straps can be used for clamping flat work pieces or they can be inverted for holding round work pieces in V-blocks or other nesting arrangements. All parts (except jam nuts) are heat treated steel with black oxide finish.

TE-CO Strap Clamp Spring Lifters

Designed to speed set-ups wherever strap clamps are used. Spring lifter slides over T-slot bolt or stud and is held by tightening the set screw on locking collar. The strap clamp rests on the support collar and the spring holds the clamp just above the final tightened height, permitting the work to be quickly and easily slid underneath.

CYLINDRICAL FIXTURE MAGNET ASSEMBLY

Cylindrical fixture magnets provide high holding values in a compact design. They can be used in fixtures, jigs, panel mounts, end of retrieving tools, hold work on machines, catches/latches, insert molding, etc. Use non-ferrous bolts for mounting.

- A: Powerful compact magnet that is insulated for press fit or use tapped hole for mounting.
- B: Extended poles can be lightly machined. Insulated for press fit or use tapped thru-hole for mounting.
- C: Extended poles can be lightly machined. Insulated for press fit or use thru-hole for mounting.
- D: Maximum strength in a compact design. Insulated for press fit or use thru-holes for mounting.
- E: Extended poles can be lightly machined. Press fit for all, some have tapped hole for mounting.
- F: Extended poles can be lightly machined. Insulated for press fit or use tapped hole for mounting.
- G: Alcomax magnet pressed into a steel cup. Painted red. Supplied with keepers on the face.
- H: Extremely powerful and compact. Ideal for shallow fixtures. Encased in durable steel cup.
- I: Extremely powerful magnet designed for press fit applications using metric sizes.
- J: Extremely powerful flush face magnet. Insulated for press fit or use tapped hole or thru-hole for mounting.
- K: Extended poles can be lightly machined. Press fit for all, use tapped hole or thru-hole for mounting.
- M: Neodymium 42 magnet with a nickel plate. Accuracy tolerance of 0.005.

Magnet Material Specifications:

- Rare earth magnets are heat resistant up to 200°F (94°C)
- Ceramic magnets are heat resistant up to 300°F (148°C)
- Alcomax magnets are heat resistant up to 800°F (427°C)
- Neodymium magnets are heat resistant up to 180°F (82°C)

DISC & CYLINDRICAL MAGNETS

Plug Style Magnets Neodymium 42, 50

**EXPANDED
LINE**

Magnetic Field Pattern

All Neodymium-Iron-Boron plugs are nickel plated to protect the brittle magnet material and avoid corrosion. They are commonly used in miniature applications such as linear actuators, sensing applications, gyroscopes, flow meters, recording devices, pacemakers, and alternators. Temperature range is -100 to +180 degree Fahrenheit (-73 to 93 degree Celsius) unless noted. All measurements are in inches and tolerances are $\pm .005$.

RECTANGULAR, DISC & CYLINDRICAL MAGNETS

Rare earth magnets are used because of their high strength-to-weight properties.

Rare Earth Magnets Shielded

Magnetic Field Pattern

Features:

- The insulator prevents loss of magnetic flux when inserted into steel components or fixtures
- Shielded magnets supply holding force in limited areas of steel tools, dies and fixtures

ALNICO, NEODYMIUM & CERAMIC MAGNETS

Alnico permanent magnets are made from an alloy of aluminum (Al), nickel (Ni) and cobalt (Co) with iron, and may contain trace amounts of copper (Cu) and/or titanium (Ti). Alcomax is a trade name for magnets made from Alnico materials. Alnico magnets provide good magnetic performance at a reasonable cost compared to rare-earth magnets, which feature a higher strength-to-weight performance at a higher price. Alnico magnets are hard, but brittle and require special machining techniques. Magnetic performance is superior to steel magnets, at a sacrifice of some mechanical strength.

Rare Earth Magnets Ceramic Block Material

Ceramic magnet is a non-metallic compound of iron oxide, strontium ferrite and small quantities of other metal oxides.

Features:

- Low cost, lightweight, high energy material
- Non-conductive, hard, brittle material
- Performs best at temperatures below 480 degree Fahrenheit (249 degree Celsius)
- Can only be cut with a diamond wheel
- Tolerance 0.005 on all dimensions

Rare Earth Magnets ON/OFF Squares

On/Off Switch Square

Switchable ON/OFF rare earth magnets are extremely powerful. ON/OFF magnets easily allows debris to fall away. Can be used on flat or round steel or cast iron. Non-marring hold. Featuring magswitch technology.

MagSquares

Simple, fast work-holding on multiple sides. Eliminates the need for tedious clamping. Pre-tapped holes on all sides for mounting jigs, fixtures, forms, etc.

Rectangular Fixture Magnet Two Pole

Rectangular Fixture Magnets - Ceramic (SrFe)

Ceramic Holding Assemblies provide a strong magnetic field. The ceramic magnet material possesses high coercive force and resists demagnetization from heat, vibration, and electrical fields. They are typically more economical than Alnico assemblies and can be used in temperatures up to 180°F. Temperatures higher than 180°F can cause the standard epoxy that holds the magnet material to fail. These magnets have a tolerance of 0.005.

Heinrich Grip-Master Screwless Vises

The Grip-Master screwless vise offers many advantages. Instantaneous, effortless setting by simply pushing on the knob controlling the movable jaw. Guaranteed positive locking by light press on locking lever. Built-in, recessed parallels level work. Large loading and unloading capacity. Hardened and ground bars and locking mechanism insure long life. Straight through drilling permitted by extra-wide clearance in base. Hardened and ground V-block attachment available for holding round or oval work securely.

Heinrich Grip-Master Fixture Locks

Adaptable to a wide range of applications and simplifies jig and fixture designing and eliminates special locking details. A simple push or pull on the bar knob sets the bar instantaneously at any position between fully open or fully closed. A light press on the locking lever gives an extra forceful forward motion to the bar, exerting a holding pressure, adjustable from 400 to 1,100 pounds. Actually compensates for variations in size of work. Its long stroke assures wide work clearance and permits quick removal of chips and burrs. No screw threads to wear or strip. Hardened and ground bar and locking mechanism. Bar left soft for 1" on work end for easy machining when adapting it to fixture.

Speed Type Vises

Designed for speed. Screw and nut hardened for long life. Heavy semi-steel castings, for strength. Heavy steel base plate, for rigidity. Standardized holes in jaws, for attaching interchangeable jaw plates and fixtures. The screw is held positively in the nut when the vise is clamped. It cannot slip; yet it is released instantly with a half-turn. Lift the screw and the jaw is free to slide to its full opening. Slide the jaw to the closed position, drop the screw into the nut and lock with a half turn. Combination of jaw plates are grooved for holding round parts, notched for holding parts above base of vise, smooth on back side. They are accurately machined, hardened and ground. Socket cap screws supplied for attaching them to vise. Vises are supplied without jaw plates.

These handy drill press vises can be used from three sides. Work can be leveled quickly because jaws have built-in parallels. Widely spaced jaw guide bars, permit drilling clear through work. Jaw sides are precision ground at right angle to parallels to permit accurate drilling from the sides without resetting the work. Horizontal V-groove, holds round stock firmly for side and end drilling.

Vise Accessories Speed Handles

Aluminum center hub with all steel handles and knobs. Black oxide finish.

PNEUMATIC SWING CLAMPS & ACCESSORIES

DESTACO Pneumatic Swing Cylinders Series TC-89R

Easily adjustable swing directions, left hand, right hand, straight pull. The compact design and high reliability make these swing clamps suitable for applications where rapid and unobstructed access to the clamping station is required. New, updated design accommodates 4mm round as well as 6.5mm x 5mm T-slot style switches. Clamp arms are ordered separately.

Switch Mounted on Power Clamp
(Power Clamp Not Included)

Switch
with Mounting Clamp

Switch Dimensions
without Mounting Clamp

Switches are activated by a magnetic ring installed on cylinder piston. As the magnetic ring moves under the switch, it closes the contacts and sends a signal to a programmable controller or other electronic device. All switches have a 9 foot lead. Switches come with tie-rod mounting clamp as standard. Minimum gauge rating required for proper operation, as measured on sensor surfaces, is 85 GA.

Item No.	A	B	C	Type	Function	Switching Voltage	Switching Current	Switching Power	Max. Voltage Drop
TC-810151	.37	.93	.53	Reed, LED, MOV w/Tie Rod Clip	Normally Open - SPST	5-120V AC/DC 50/60 HZ	0.5 Amp. max. - 0.0005 Amp. min.	10	3.5 Volts
TC-810155	.37	.93	.53	Hall Effect, LED Sourcing w/Tie Rod Clip	Normally Open - PNP	6-24V DC	0.5 Amp. max.	12	1 Volt
TC-810156	.37	.93	.53	Reed, LED, MOV	Normally Open - SPST	5-120V AC/DC 50/60 HZ	0.5 Amp. max. - 0.0005 Amp. min.	10	3.5 Volts
TC-810157	.37	.93	.53	Hall Effect w/Tie Rod Clip	Normally Open - NPN	6-24V DC	0.5 Amp. max.	12	1 Volt
TC-810158	.37	.93	.53	Hall Effect	Normally Open - PNP	6-24V DC	0.5 Amp. max.	12	1 Volt

Note: TC-810156 and TC-810158 use a band to mount the switch to the wall of the cylinder. All other models use tie rod clamp clip.

AUTOMATION

Linear Motion Systems

Highly diverse product offering including: crossed roller, pneumatically controlled, cam followers, ball screws and nuts. At pace with latest technologies such as self-lubricated and anti-creep carriages and guides.

Grippers

Cost effective OEM machine builder solutions, with pneumatic and electrical variations. Suitable for various demanding environments – cleanroom, harsh, precision, fast paced gantry.

Bearings

Suits various miniature and large applications requiring bearing types that include: mounted, non-mounted, open, shielded, needle roller, ball, tapered roller and side bearings.

Suction Cups

Dynamic assortment of sizes, shapes, durometers, mounting options and related accessories. Suitable for a wide range of temperatures, contours and surface conditions.

Automatic Tool Changers

Lightweight to heavy payload solutions. Multiple styles of tool changers to choose from. Variety of electric and vacuum utilities supported. Advanced locking mechanism to minimize deflection after coupling.

Energy Supply Systems

Industry leading delivery, modular design with the ability to add or remove links to the existing supply systems.

Pneumatic Components

Partnerships with leading brands enables us to carry an intensive breadth of valves, hoses, FRLs, actuators, tube fittings, etc.

Extruded Bars

Highly modifiable profiles offered in various lengths and styles. Customization includes ability to alter profile lengths, shapes and finishes. Supplemental components like fasteners, end supports, panels, access hardware, and add on also available.

Collars & Couplings

One and two-piece styles for convenience of choice. Available materials: steel, stainless steel, and aluminum.

Cutting & Machining

Offering a vast range of products that provide solutions for various automation processes including, but not limited to: tapping, threading, drilling, milling, deburring, sanding, etc.

Power Clamps

Manual and pneumatically powered clamps with sensing capabilities to automate processes, with different mounting and clamping styles.

Cobot End Effectors and Accessories

Our **Cobot End Effectors** and **Cobot Accessories** can make it happen for your manufacturing applications. With ISO mounting tools, quick-move bases, and manual tool changers that work with industry standard cobots, there's hardly a limit to what your application can accomplish with or without a human presence.

Quick-Move Bases

Quick-Move Cobot Base Changers allow precise Cobot portability between multiple workstations for increased flexibility and productivity. A single Quick-Move Cobot Base Plate can be coupled to an endless number of workstation mounting bases for multi-purpose Cobot applications.

Quick-Move Base does not come assembled. Components sold separately.

Item No.	Description
Quick Move (Workstation) Base Kit Components:	
TC-CB200B01	Workstation Base Plate For Cobot Base Connector - Quick Move Base
TC-CB200C01	Clamping Collar For Cobot Base Connector - Quick Move Base
TC-CB200R00	Blank Cobot Plate For Cobot Base Connector - Quick Move Base
TC-CB200R01	Pre Drilled Cobot Plate For Cobot Base Connector - Quick Move Base

Pneumatic Gripping Solutions

Pneumatic parallel grippers operate with compressed air and are designed for automated pick-and-place applications. These grippers offer easy installation, low maintenance, and finger compatibility with competing units for quick upgrades and cost savings.

Gripping Solutions

For robotic and cobotic automated applications, we offer durable vacuum cups, arm assemblies, aluminum tubes, adapters, sensors and high-speed vacuum generators to help increase productivity. Our wide range of vacuum cups are available in various shapes, sizes, and materials. Plus, our auto-release vacuum generators offer single-line operation, integrated blow-off, and built-in exhaust silencer.

TC-MG05001	1.75 Lbs Max Payload Magnetic Gripper
TC-MG05002	6.60 Lbs Max Payload Magnetic Gripper

Magnetic Gripping Solutions

The Magnetic Gripper Kit is an ideal solution for pick and place applications of ferromagnetic materials such as steel and iron. This gripper is an air actuated device requiring no electrical connections for operation. The magnetic gripper base mounts directly to robots with an ISO 9409-1-50-4-M6 pattern.

ARV® - the original, patented Auto-Release Venturi offers users the fastest vacuum and blow-off in the industry with single line operation, integrated blowoff and built-in exhaust silencer.

Cobot Tool Array and Extensions

Tool Array kits enable the operator to mount up to 5 tools to ISO 50 mount cobots. A single cobot can do up to 5 different operations without the need for a tool changer. Tool extenders come in variable lengths that separate the cobot adapter from the tool plates. The tool extenders also allow for more cobot-reach, access into tighter work spaces and elimination of interference from onboard vision systems.

Tool Array and Extension Adapters

Featuring cobot adapters for both tool-extension and tool-array purposes. Fast and simple installation with easy to follow instructions. Includes all tools and hardware necessary to assemble and mount on your cobot.

Item No.	Description
TC-TE05001	Tool Extension Adapter For Cobots
TC-MM05001	Tool Array Adapter For Cobots

TC-TE05001

TC-MM05001

Extension Kits

Multi-Mount Tool Extension Kits allow access into tighter work spaces by increasing the tooling distance away from the robot arm mounting surface. Use Multi-Mount Tool Extenders to eliminate interference with onboard vision systems, extend the robot reach into the work space or facilitate easier product placement in assembly, sorting and packing operations.

Item No.	Description
TC-TE25040	1.575 Inch Extension Rod For Tool Extender Adapters
TC-TE25060	1.362 Inch Extension Rod For Tool Extender Adapters

Cobot End Tool Tree/Rack Solutions

Organize your robot tools with DESTACO's modular TC1 Tool Tree Storage Kit. Tools mounted to TC1 tool plates are stored securely and quickly by sliding the tool plate into the tool holder.

The Tool storage tree is a cost effective and expandable solution. The user can add or remove tool holders as needed. Organized tools are critical to maintaining a clean and efficient workstation.

Tool Tree does not come assembled. End effectors sold separately.

ELH-1100	Latch Finger	ELH-1100
ELH-1101	Latch Hooked	ELH-1101
ELH-1102	Latch Hooked	ELH-1102

Quarter Turn Cam Latches

An ideal fastener for gasketed doors and access panels subject to wide thickness or misalignment tolerances. Grip length is variable from ⅛" to 1 ⅛" and is set by rotating the center spindle. The DPL-106-KB grip length can be adjusted by hand and the DPL-106-AB grip length is set with a screw driver. The latch can be opened with a quarter turn of the outer ring. Made of steel with black plastic outer ring. Panel thickness .048" min. to .128" max. Installation hole diameter is .765". Installation instructions included.

CABINET LATCHES

Low Profile Cabinet Latches

Designed mainly for use on light cabinet doors and panels. A distinctive "snap" lets user know that the latch is fully open or fully closed. The dead bolt latches each come with a hex nut for mounting them to a door or panel. The cam is held in place with a lock washer and screw. Plug barrel and hex nut are zinc die cast. Cam, lock washer and screw are made of steel. Nickel plated finish. Hex accepts 1/4" hex tool. For use on panels up to 1/4" thick. Cams are straight.

Item No.	Style	MFG #
LOK-520	Slotted	520-XA-NK
LOK-521	Hex	521-XA-NK
LOK-522	Knob	522-XA-NK

Key Locking Cam Latches

90 degree cam rotation. Zinc alloy die cast housing and cylinder. Five disc tumblers. Stainless steel bezel. Cams are available offset or straight, 5/16" wide and 3/32" thick. Brass keys are keyed alike.

Item No.	B	C	D	Cam Type	MFG #
LOK-600	7/16	1/4	7/8	Straight	C-610-XS/KS-13-701

Butt Joint Panel Fastener

Progressively draws panels together. Helps provide airtight or water tight seal. Adjustability for manufacturing tolerances and gasket shrinkages. Uses 8mm hex to actuate. Bright chromate dipped, zinc plated carbon steel. Ultimate tensile load 1,400 lbs., ultimate shear load 2,000 lbs. Receptacle not included and must be purchased separately.

Item No.	MFG #	Description
SC-225	R2-0055-02	Latch
SC-222	R2-0002-02	Receptacle

Spring Latches - Knob Style

Smooth latching action. Action of spring cam provides wide grip ranges. Specify one size for several applications. Black nylon with stainless steel spring. Housing is bright chromate zinc alloy plated steel with sealer. Designed to be riveted or screwed in place.

Item No.	MFG #	A	B	C	D	E	F	G	H	Max. Panel Thickness	Installation Hole Dia.	Grip

PUSH BUTTON LATCHES

Slam-Action Latches

Knob Style

Push Lock

Key Activated

Single hole mounting. Latches by simply pushing door closed. Housing ring is made from die cast zinc chrome plated steel. Knob style has plastic knob. Push lock and knob style are available with or without locks and can be operated without key when left in the unlocked position. Knob style and key activated style will unlatch with a 90 degree turn. Push lock style has plastic body that provides corrosion resistance and unlatches by just pushing the button.

Aerolatch™ Lever Assisted

Non-corrosive and UV resistant lever assisted draw latch. To operate, align pivot bosses on lever with slots in keeper. Snap lever over keeper detent. Overcenter action and detent keep latch closed. Latch absorbs and reduces vibration. Base, lever and keeper are made of black glass filled nylon. Latch body is black EPDM Rubber. Four mounting holes are designed for #10 screws (not included). Clamp forces listed are for average steady state at room temperatures.

DRAW LATCHES & KEEPERS

These versatile, medium size toggle latches are built for tough use on chests, cabinets, etc. Steel latches and strikes are zinc plated with a bright chromate finish. Stainless latches and strikes are made from Type 300 series stainless. All mounting holes on latches and strikes will accept .156" dia. rivets or #6 round head screws. Latches that do not require strikes are designed to latch on notches, corners, lips, etc. The secondary latch prevents accidental opening. **Note:** Strikes are not included with the latch and must be purchased separately.

southco®

Mounts inside your enclosure. Uses same keeper as above. Three different pull up forces. Installs either right side or left side by inverting. Use #4 screws or .125 rivets to install. Grabber catch has microswitch option to be used as a mechanical grabber catch with an electric switch. Switch is designed to operate an indicator light or form part of a non-safety related logic circuit.

Rubber Door Holder

Black rubber and nylon construction. Includes male stud and female socket. Male stud can be mounted with a washer, nut and bolt, or with a washer and screw. Female socket includes a threaded metal insert and can be mounted to any 5/16-18 threaded bolt or stud. Mounting hardware not included. Distance between surfaces 1 13/32" min. to 1 35/64" max.

Item No.	Description	MFG #
HH-38	Rubber Door Holder	S38-RXXAXX03

Knuckle Catch Polyacetal / Polyamide White

This knuckle catch is strong yet light and is made of polyacetal while strike is polyamide. Holds cabinets secure (15.6 lbs. pull force) and is ideal in contaminated areas.

Item No.	Push in Force (lbs)	Pulling Force (lbs)	MFG #
SUG-524	12.5	15.6	K-CATCH/WH-T

Roller Catch 304 Stainless Steel / Polyethylene

Made from 304 stainless steel with polyethylene rollers, this roller catch is ideal for use in corrosive areas.

Item No.	Push in Force (lbs)	Pulling Force (lbs)	MFG #
SUG-544	2.2	6.0	STBRC

CATCHES

Rotary Catch
Polyacetal / Polyamide
White

These rotary catches keep doors shut tightly and are ideal in a c
sive environment. Catch and strike are made of polyacetal, roller:
are made of polyethylene.

DRAWER SLIDES

All slides are unhardened. Bright zinc finish with steel ball bearings. All have traditional hole patterns except where noted otherwise.

Drawer Slide Selection

1) Measure length of drawer from back of drawer front to rear of drawer. 2) Select travel length desired. 3) Determine slide height and drawer side clearance requirements. 4) Determine detent, lock-out or lock-in and disconnect requirements.

Used for Desks, Credenzas and Cabinets

Light Duty Drawer Slides

Item No.	MFG #	Slide Length	Slide Travel	Load Rating Lbs./Pr.
AI-0416	C2132-C16D	15.75	11.05	75

CORNER & CONCEALED HINGES

Latch Hinges

Dual purpose latch hinges are ideal for lid or door latches, or easily removable hinges. The spring loaded, chamfered pin holds securely, whether used as a latch or hinge. Steel has a zinc finish. Stainless is Type 303 stainless steel. No holes included except on heavy duty latch hinges. Extra heavy duty can be used left handed or right handed. Available left or right handed. Left handed pictured.

Spring Release Hinges

Front View

Side View

Door comes right off with the spring release hinge. It is a quick release hinge that can be mounted in any position and requires no tools to take the hinge off. An easy squeeze of the knurled knob retracts the spring loaded pin from the knuckle to release the leaf. Precise manufacturing standards eliminate excess side and end play from minimum door movement. Type 300 series stainless steel. Leaf thickness of .050".

CONCEALED HINGES

Concealed Hinges Fixed Installation

90 Degree Free Swinging

90 Degree Stay Open

180 Degree Free Swinging

These hinges are available in 90 degree, 180 degree and 90 degree with stay open feature. They are either Type 300 series stainless steel or zinc plated steel. Both steel and stainless steel come with black acetal washers and bushings. Panels over .16" thick will require a 45 degree chamfer. Install with either M5 or No. 10 hardware, or weld.

Light Duty Hinge

Zinc finished steel. Removable pin.

Item No.	Description	MFG #
HH-106	Light-Duty w/Removable Pin	F6BXXXXXNXX

Concealed Removable Hinges

Mounts inside formed doors. Available in zinc plated steel or Type 300 series stainless steel. Accommodates either left or right hand applications. Internal spring and release pin are Type 300 series stainless steel on both the steel or stainless models. Comes with one frame leaf and one door leaf per package. Dimension E +.02" equals the distance from the outside surface of your frame to the inside surface of your door.

GASKETING

Flat Gasket

Gaskets are used in sheet metal fabrication to seal doors, and many other applications where sealing are a necessity. These gaskets meet NEMA 12 to NEMA 4X applications. They are easy to install due to the self adhesive backing, increasing its economical use. These gaskets can easily be cut to size and shape to fit many applications. These gaskets also come with fiber backing which eliminates stretching, helping to maintain seal and stay in position.

How To Choose The Right Caster

There is no simple formula or rule that can be followed in selecting the proper casters. Many varying and individual factors must be balanced to make the selection that will do the best job for you. The following are several of the more important considerations.

Load Weight. The heavier the load, the larger the wheel required for the caster. The weight of the load also influences the mobility of the wheel. Roller or ball bearings are recommended for loads over 400 pounds. Weight capacities are shown for each caster in this catalog.

Floor Conditions. Make sure the wheel you select is large enough to pass over cracks in the floor, tracks, moldings and other obstructions. For floor protection on linoleum, tile, carpet, etc., use polyurethane or Performa rubber wheels.

Unusual Conditions. Each wheel material has certain characteristics which will give the best results where unusual conditions exist. For example, where acids, oils, chemicals and other conditions harmful to rubber are present, Colson polyurethane, polyolefin, Maxim, phenolic or steel wheels are recommended. Check conditions, then select the caster and wheel.

Rolling Ease. The larger the wheel diameter, the easier it rolls. Roller bearings carry heavier loads. Ball bearings roll easier but carry lesser loads. When possible, use the largest ball bearing wheel for best results.

Extreme Climates. Room temperatures are no problem for most casters. But extreme cold or heat can be a problem. Colson helps solve this problem with "Colson 45"—the green lube which assures caster rolling ease from 45°F below zero to 260°F above. It's standard on most Colson casters. (**Note:** Some wheel types should not be used in extreme temperature ranges. Consult factory.)

Caster Terms

Caster Combinations for Trucks

In building, repairing and refurbishing mobile equipment, various effective caster combinations may be used. Several types of mountings are illustrated below.

Three Swivel.

For barrel dollies and small portable machines. Affords excellent maneuverability. Be sure to select casters designed to take the weight load on three casters rather than the usual four.

Tilt Mounting. A tilt mounting is the most economical, but should be limited to lighter loads. The tilt is best when the load wheels are 1/8" taller than the balance wheels. Not recommended for use on ramps.

Four Swivel. Where a side motion is frequently needed, the four swivel arrangement is excellent. If the casters are equipped with swivel locks, this mounting is also practical for long straight travel as well as use on ramps. A most versatile arrangement.

Two Rigid, Two Swivel.

Most practical and inexpensive arrangement for straight and/or long distances. Can be used for heavy or medium loads, depending upon the weight capacity of the casters selected.

Diamond Mounting.

Two rigid and two swivel casters, but the diamond shaped mounting greatly increases maneuverability. This mounting is not recommended for ramps.

Four Swivel, Two Rigid.

This is a level mounting design for heavy loads and long trucks. The two rigid casters help to distribute and reduce the load on the swivel units and thereby maintain good maneuverability and easy steering.

Colson Caster
Swivel & Rigid
With and Without Brake
Applications: 300 - 1250 lbs.

Top Plate Dimensions

- Weight capacities up to 1,250 lbs. per caster
- All wheels have 2" tread width
- Available in 4", 5", 6" and 8" wheel diameters
- All wheels have roller bearings
- Double ball raceways for smooth swiveling action
- 1/4" thick steel leg construction
- 5/8" diameter permanent rivet kingpin
- 1/2" hollow axle with grease zerck and lock nut
- RoHS compliant industrial zinc finish for corrosion resistance

PLATE CASTERS

Wheel Type Description			
Duro-Tred	— Polyurethane tread permanently vulcanized to a semi-steel or aluminum core. Cushioned ride and long wear under heavy load. Excellent mobility.	Polyflex	— Polyolefin wheel is light weight and impact resistant. Withstands water and chemicals. Non-marking, good mobility.
Dyna-Tred	— Santoprene thermoplastic rubber resists chemicals, high temperatures and wear. Polypropylene hub won't dent, mar or stain.	Rockite	— Hard rubber composition throughout - impervious to oil and greases.
Dyna-Tred Poly	— Polyurethane allows high load capacity and extended wear. Resists chemicals. Polypropylene hub won't dent, mar or stain.	Ruberox	— Composition rubber wheel combines a soft rubber tread with a hard rubber core. Quiet movement and cushioned ride.
K-Wheel	— High strength solid urethane withstands temperatures from -50° to 180° F. Load characteristics of steel. Steam cleanable.	Semi-Steel	— Cast iron toughened with steel. High load rating and long wear life.
Plaskite	— Phenolic compound reinforced with macerated fabric makes a high impact wheel resistant to oil, gas, etc.	Sintered Iron	— Powdered iron, compacted and sintered to cast iron strength. Concentric and smooth tread.
		Vulcanized Rubber	— Cushioned rubber tread permanently vulcanized to semi-steel core.

Bearing Type Description	
Plain	— Wheel bore rides on the spanner bushing or axle. Used for light loads and low movement.
Roller	— For heavier loads-anti-friction.
Self-Lubricating	— Oil-impregnated bronze for use where there is moisture or low maintenance is needed.

CASTER WHEELS

Colson Caster

2" Width

Up to 8" Diameter

Applications: 300 - 1250 lbs.

Thermo Plastic Rubber Flat

- Quiet, non-marking shock absorbing ride
- Good in wet environments, resistant to most chemicals

Thermo Plastic Rubber Donut

- Quiet, non-marking shock absorbing ride
- Good in wet environments, resistant to most chemicals

Mold-On Rubber

- Quiet, shock absorbing ride
- Rubber bonded to cast iron core

Polypropylene

- Excellent impact strength
- Superior in wet environments, resistant to most chemicals

Urethane

- All-purpose wheel
- Good in wet environments, resistant to most chemicals

Mold-On Poly

- Good roll-ability and floor protection
- Polyurethane bonded to cast iron core

Phenolic

- Hard tread, rolls easily
- Abrasion resistant

Cast Iron

- Excellent impact strength
- High temperature industrial use up to 600°F

CASTER WHEELS

Wheel Type Description	
Cast Iron	— Toughened with steel, high load rating and long wear life.
Polyolefin	— Black molded polyolefin.
Rubber on Aluminum	— Molded and Mechanically locked to aluminum core.

**ER Wagner
Durafoam Wheels
Light-Medium Duty
Applications: 50-350 Lbs.**

ER WAGNER

Dished

Solid

Durafoam wheels have a dished or solid profile. Wheel material is black polyolefin. Requires no bearing which makes them ideal for corrosive applications. They have good floor protection and offer easy rolling. They are recommended for light to heavy loads on carpeted and hard surfaced floors. They are non-marking, resistant to water, oil and most acids and chemicals. Recommended operating temperature range is -20° F to 180° F. Tread hardness is 60-75 Shore D.

Application: 500 Lbs.**

ER WAGNER

Mold-on rubber wheels consist of a soft black rubber tread permanently bonded to an aluminum core. Excellent floor and load protection, quiet operation and absorbs shock and vibration. Recommended for light to medium loads on hard surfaced floors. Recommended operating temperature range is -20° F to 160° F. Tread hardness 70-85 Shore A.

CASTER WHEELS

ER Wagner
Duratex Wheels
Medium-Heavy Duty
Applications: 500 Lbs.

ER WAGNER

Duratex wheels are made from a black phenolic resin. They are recommended for medium to heavy loads on carpeted and hard surfaced floors. They provide good protection for floors and are quieter than steel wheels. Recommended operating temperature range is -45° F to 300° F. Tread hardness is 102 Shore E.

Item No.	Wheel Dia. x Width	Wheel Type	Capacity (Lbs.)	Hub Width	Axle Size	Bearing
WC-1338-02	3 x 1½	Phenolic Resin	500	1½	¾	Roller
WC-1338-04	3 x 1¼	Phenolic Resin	500	1½	¾	Roller

ER Wagner
All-Hard Rubber Wheels
Light-Heavy Duty
Applications: 100-400 Lbs.

ER WAGNER

All-hard rubber tread material consists of a black hard rubber molded to a black hard rubber core. Used for light to heavy loads on carpeted or hard surfaced floors. These wheels roll with ease, are non-sparking and resistant to water, oil and most acids. Recommended operating temperature range is -20° F to 125° F. Tread hardness is 70-85 Shore D.

Item No.	Wheel Dia. x Width	Wheel Type	Capacity (Lbs.)	Hub Width	Axle Size	Bearing
WC-1309-05	2 x 1½	Hard Rubber	100	1½	¾	Delrin
WC-1309-10	2½ x 1½	Hard Rubber	175	1¼	¾	Sintered
WC-1309-15	2½ x 1¾	Hard Rubber	115	1½	¾	Delrin

WC-1304-55	6 x 1¾	Hard Rubber	400	1½	¾	Delrin

ER Wagner
All-Rubber Wheels
Light-Medium Duty
Applications: 75-200 Lbs.

ER WAGNER

All-rubber wheels are made of a black soft rubber molded to a black hard rubber core. They are recommended for light to medium loads on hard surfaced floors. Along with a quiet operation it also provides a cushioned ride absorbing shock and vibration. Recommended operating temperature range is -20° F to 125° F. Tread hardness is 70-85 Shore A.

Item No.	Wheel Dia. x Width	Wheel Type	Capacity (Lbs.)	Hub Width	Axle Size	Bearing
WC-1304-20	2½ x 1¾	Soft Rubber	90	1½	¾	Delrin
WC-1304-10	2½ x 1½	Soft Rubber	120	1½	¾	Delrin

ER Wagner
TPR Rubber Wheels
Light-Medium Duty
Applications: 275-300 Lbs.

ER WAGNER

TPR rubber wheels consist of a dark gray thermoplastic rubber molded to a gray polyolefin core. They roll easily, quietly and provide excellent floor protection. They are recommended for light to medium loads on carpeted and hard surfaced floors. Recommended temperature range is -40° F to 180° F. Tread hardness 65-75 Shore A.

BALL CASTERS & TRANSFERS

SKF Hevi-Load™ Inch

Type A

Type B

Type C

Type D

Used for heavier loads than ball casters. Ball transfers use a recirculating ball system to support and facilitate the rotation of the primary ball. The small balls travel on a hardened steel, precision machined track that resists wear and damage. Runs equally well in any position. Ideal where damage and impact protection is essential. Ball units provide instantaneous change of direction not possible with wheel casters.

SKF Low Profile Metric

Flange mounted ball transfers offer a low profile, multi-directional solution to various material handling, positioning, and/or conveyance applications. All units, except the stainless steel model, come complete with a felt seal. The stainless steel unit is made from 420 stainless steel and has a unique multi-hole filtration system designed to purge out contamination and is provided with no oil/no seal, which allows the unit to operate in harsh conditions by efficiently filtering out debris through the base. Metric dimensions are in millimeters.

SKF-704	45	1,344	62	75	19.0	53.5	4.0	10.0

SKF Heavy Duty Metric

Solid body steel ball transfers were designed for heavy and impact load applications. The units incorporate a seal and self cleaning hole for maximum efficiency and smooth running. They are machined with solid steel bodies and hardened work surfaces. Steel models are steel bodies with chrome steel. Hardness 60-66 HRC, zinc plated finish. Stainless models have stainless bodies A1S1 303 and stainless bearings A1S1 420 or 440, bright machined. All dimensions are in millimeters.

SKF Spring Loaded Ball Transfers Inch

Type A

Shears, presses and molding machines are just a few of the many applications where open loaded ball transfers can be used. A press for example may have spring loaded ball units set in the platen to facilitate the on and off loading of the workpiece. When the press operates the springs compress and the ball units sink below the surface-leaving the workpiece on a firm base. When pressure is released the ball units rise allowing the ball to roll, enabling the workpiece to be removed easily. Steel bodies with hardened carbon steel balls. "A" style flanges have three equally spaced holes on bolt center diameters (BCD) listed below.

Item No.	Type	Ball Dia. Inch	Support Load (Lbs.)	Load (Lbs.) to Fully Depress	A	B	C	D	E	F	Mounting Hole Size BCD

These leveling pads have a 15° swivel off centerline to adjust to uneven surfaces and level machine tools, electronic racks, benches, etc. Hardened ball, except in stainless, prevents galling and forms its own seat. Large diameter pad design assures solid support. All steel parts are zinc plated. Metric dimensions are in millimeters. Metric load ratings are in kilograms.

These leveling pads have a 15° swivel off centerline to adjust to uneven surfaces and level machine tools, electronic racks, benches, etc. Hardened ball, except in stainless, prevents galling and forms its own seat. Large diameter pad design assures solid support. All steel parts are zinc plated. Metric dimensions are in millimeters. Metric load ratings are in kilograms.

These leveling pads have a 15 degree swivel off centerline to adjust to uneven surfaces and level machine tools, electronic racks, benches, etc. Hardened ball prevents galling and forms its own seat. Large diameter pad design assures solid support. Lag holes provided for mounting to the floor. Zinc plated with gold chromate finish.

We work with many suppliers to give you solutions to fit your budget.

PLASTIC BASED LEVELERS

Light Duty Glides

Nylon Pad

Elastomer Pad

These industrial glides are an excellent and inexpensive solution for light duty applications such as office furniture, shelving, point of purchase (POP) displays, cabinetry and small machinery. The bases are available in a sturdy nylon base for glide applications or an elastomer base for non-skid applications. Studs and shell available in both clear zinc steel and ANSI Type 303 stainless steel.

Vliier Light Duty Glides

Elastomer Pad

Nylon Pad

For light duty leveling applications. Can be used on furniture, light duty machines, tables, cabinets, light weight equipment, etc. Made of steel. Available with elastomer pad for non-skid applications or nylon pad for glide applications.

**Mounting Feet
Bonded Neoprene**

These mounting feet let you isolate all types of machinery and equipment from vibration and floor motion. Made of neoprene bonded to a steel insert. These mounting feet are available with just the steel insert (allowing you to make a custom stud) or with a stud epoxied in the insert with one hex nut.

MACHINERY MOUNTS

Sunnex Stainless and Zinc Anti-Vibration Mounts

- Corrosive resistant design
- Designed with high grade materials, nitrile rubber, stainless steel
- Available in a wide variety of sizes
- All models available in zinc plated steel or #2 stainless steel

Stainless for damp or corrosive areas. Durable thread connection to equipment. Swivel movement ± 7 degrees for stable support on inclined floors. Neoprene rubber ensures equipment does not move.

Vlier Anti-Vibration Leveling Pads Inch and Metric Threads

These anti-vibration leveling pads are the only swivel leveling devices specifically designed to provide low frequency vibration isolation, leveling and shock attenuation for electronics and machinery. These pads have a 15 degree swivel off center to adjust to uneven surfaces. They feature over 1/2" of black neoprene permanently bonded to the base. The steel parts are zinc plated with black chromate finish. The neoprene has an operating temperature range of -20 to +180 degree Fahrenheit. Metric dimensions are in millimeters.

Protects general metalworking and process equipment (punch presses, milling machines, lathes, mixers, injection molding machines, grinders, etc.) from shock and vibration, and simplifies their installation. 2 1/2" of neoprene provides controlled deflections under load; high isolation efficiency for vibration and shock forces; reduction of transmitted sound. Mounts are adjustable up to 1/2" above loaded height by a few turns of the leveling bolt. Tightening the check nut then maintains the exact height you need. Corrosion-resistant outer housing provides high strength; neoprene elastomer resists oil, grease, ozone, and caustics; zinc plated hardware resists rust. Hex head bolt and locknut furnished with mounts. All height dimensions indicate free height of mount under no load.

Reid Supply is a Full Line Distributor of Destaco Products

WORKHOLDING SOLUTIONS

Our Destaco product offering includes stainless steel clamps that are suitable for many applications that demand a clamp that is more robust than traditional steel models and are well-suited for pharmaceutical manufacturing and other high temperature or harsh environments.

Sunnex Heavy Duty Industrial Machine Mounts

Benefits:

- High strength machined components
- Rapid installation and leveling
- 80% vibration reduction
- Vertical and horizontal isolation

Application:

- Milling machines
- Presses
- Injection molding
- Packaging machines

SX-4	12,000	5,500	4,400	3,300

Heavy duty industrial machine mount designed with high strength construction for reduction of both shock and vibration. Prevents vibration from affecting other machines and prevents mounted equipment from outside vibration effects. Provides precision leveling with large support plate and meets OSHA standards by preventing "walking".

General Purpose

These leveling mounts are designed for installation of industrial machinery where the ratio of shear loads to vertical loads is less than or equal to 1:5. Base is unthreaded. The stud rests on the pad and is not threaded in or fastened to the pad. Self-aligning feature compensates for uneven floors without sacrificing stability. Scientifically designed diamond suction cells of the neoprene insert firmly anchor the machine to the floor. Recommended for a wide range of industrial machinery and equipment where simple precise leveling is required. One inch level adjustment.

Item No.	Maximum Load in Lbs.			A	H
	Non-Impact Machinery	Impact Machinery	Leveling Bolt Size		
VP-1	500	350	½-13 x 6	4	1
VP-2	1,000	700	½-13 x 6	4	1
VP-3	2,000	1,400	¾-11 x 8	4	1
VP-4	2,000	1,400	¾-16 x 6	7	1¼
VP-5	4,000	2,800	¾-16 x 6	7	1¼
VP-8	12,000	8,500	1-14 x 8	7	1¼

Compression Shear Leveling Mounts

Durable, high-quality mount combines effective compression and shear isolation from vibration and shock with the convenience of an internal leveling device. Deep cavity design allows excellent vibration and shock control in both the vertical and horizontal direction. Heavy-duty ductile iron cover and chemically resistant neoprene insert. Internal leveling device easily levels your machine up to ½ inch. Specially designed recess on top of cover houses a rubber washer allowing superior contact between the machine and mount. Concentric rings on base of neoprene insert prevents walking or creeping. Ideal for lathes, milling machines, punch presses, printing machines, shears, brakes, injection molding machines, grinders, etc. Includes all necessary hardware.

Item No.	Maximum Load in Lbs.			A	H
	Non-Impact Machinery	Impact Machinery	Leveling Bolt Size		
VP-11	1,500	1,000	½-13 x 6	3.5	1½
VP-12	4,500	3,000	¾-11 x 8	5.5	2¼

Note: Dimension H has no load

MACHINERY MOUNTS

Pivotal Levelers

Made of tough bonded neoprene, these patented pivotal levelers keep equipment level and dampen an average of 85% of noise and vibration. The mounting nut, which holds the stud, is molded in the pad in a steel bracket and rotates freely permitting 1/4" or more of leveling. These levelers are available with just the mounting hex nut (allowing you to make a custom stud) or with a stud epoxied in the mounting nut with one hex nut.

Cushioned Machine Leveling Mounts

Reduces noise and vibration on heavy machinery, compressors and presses. High strength aluminum alloy mounting plate is imbedded in each pad with two tapped mounting holes for installation on all types of machines. The elastomer compound used in these pads is highly resistant to oil and chemicals. Included with each pad is a 1/2" thread cold forged 2 1/2" long bolt. Thousands of tiny suction pockets on the bottom prevent machine from walking or slipping out of position.

Item No.	Size	Load Range Lbs.	Durometer
CO-1	4" x 4"	4,000	60
CO-2	4" x 4"	4,000 - 10,000	80

CO-4	6" x 6"	4,000 - 10,000	80

Light Duty Wedge Mounts

Used for leveling all types of production machines. Made of cast iron with non-skid pads on top and bottom. Excellent isolation and dampening properties. Free standing, compact, low construction height. Fine adjustments under full load. Pretensioned wedges for transverse stability and self-locking wedges for longitudinal stability.

Item No.	Max. Load Lbs.	A	B	Mid-Height C	Leveling Range
AWM-2	2,000	6	3	2 3/8	+/- 3/16

AWM-4	6,500	8	8	2 1/2	+/- 1/4

Heavy Duty Wedge Mounts

Designed for installation and precise leveling of heavy industrial machinery. Three machined wedges are mounted and held together by a horizontal adjusting bolt. A lock screw secures the mount in the leveled position. Keys in the sliding surfaces of the wedges ensure rigidity within the mount construction. A special opening allows for bolting of the machine to the floor. Maximum leveling is 1/4 inch. If more height is required a shim plate may be used.

VP-51*	9,000	6	4	2

*Neoprene top and bottom for vibration, noise and shock isolation.

LEVELING MOUNTS

Sunnex Anchoring Hygienic Anti-Vibration Mounts

STAINLESS STEEL
OPTION AVAILABLE

ANSI Type 304 stainless steel provides high corrosion resistance. Rounded polished base for fluid run-off during wash down applications. 5 degrees swivel for good floor contact. Rubber base meets FDA 177-2600. Operating temperatures are -20 to 100 degree Celsius. Available with one or two anchoring holes.

Sunnex Low Profile Anchoring Leveler

STAINLESS STEEL
OPTION AVAILABLE

Solid stainless steel construction for heavy loads. Rounded profile makes leveler easy to clean. ANSI Type 304 stainless steel for high chemical resistance.

Withstands temperatures of -20 to 100 degrees Celsius. Wrench flats in bolt provide full use of threaded bolt. Available with either 1 degree or 12 degrees of swivel.

Sunnex Overall Hygienic

STAINLESS STEEL
OPTION AVAILABLE

Overall hygienic stainless steel mounts meet all USDA requirements for food processing equipment. Rubber contains no voids and is vulcanized to the housing for a completely hygienic seal. ANSI Type 304 stainless steel provides high corrosion resistance. Full range of motion up to 10 degrees. Pivot provides secure footing and complete vibration control.

Mitutoyo

Trusted Leader in Measurement

MITUTOYO is known worldwide as a metrology leader specializing in the production of high-tech measuring instruments.

Digital Indicators

Ideal for measuring short, linear distances in mechanical engineering, machining, and manufacturing applications.

Surface Roughness Testers

Featuring both skidded and skidless types that work independently of mains power, allowing you to make on-site measurements.

Thickness Gauges

These are used to measure the thickness of sheet metals, pipe, tubing, wire, and other materials.

Micrometers

Get the most precise measurements. Each micrometer they manufacture is rigorously tested before it leaves the factory.

Digital Calipers

The new variation that displays an exact reading on a digital screen

Reid Supply is a Full-Line Distributor of Mitutoyo Products

VIBRATION MOUNTS

Compression Vibration Mounts Neoprene

Protects against shock, vibration and noise in compression load applications. Use with compressors, motors, fans, generators, etc. Made from neoprene rubber with metal inserts and plates.

VIBRATION MOUNTS

Cupmounts

Industrial cupmounts provide excellent protection against severe impact shock, vibration and noise. High vibration dampening characteristics. Fail safe, rugged interlocking metal and neoprene construction. Metal cupmount is cold rolled steel. Low profile compact design. Metal top plate is domed shape to guard against oil contamination. High-grade neoprene elastomer provides resistance to oil and ozone.

Item No.	Max. Load in Lbs.		A	B	C	D	E	H	T

Stainless Steel Compression/Shear Mounts for Harsh Environments

Compression/Shear mounts provide excellent protection against shock vibration and noise in compression and shear applications. Developed specially for applications in harsh working environments in food, pharmaceutical industries, or others where strict hygiene is required. High dampening characteristics. Stainless top plate is dome shaped to guard against oil contamination. Low profile, compact design. Elastomer insert is made of highly chemical resistant nitril with good deflection properties. Concentric rings on the base of the insert firmly anchor machine to the floor.

Item No.	Max. Load in Lbs.		B	D	H	T

VP-33	2,800	1,800	4	5 5/16	1 11/16	3/8-11

Pneumatic Elastomeric

This machinery mount is a pneumatic elastomeric mount, well-suited for applications requiring higher deflection isolators. Vibration can be reduced as much as 90%. The high stability horizontal to vertical stiffness ratio is one-to-one, insuring excellent stability without the need for lateral restraints. Because the heavy wall construction is an integral part of the system, when significant shock forces are applied, the mount deflects and the shock load is transferred to the outer wall. Will not bottom-out if properly installed. Will continue to support and isolate even with no air pressure. Leveling the machine is easily accomplished by adding or releasing air.

GraLab Electromechanical and Electric Timers

Versatile, accurate time-keeping devices that are reliable and simple to use in any industry and a wide range of applications

With a reputation through more than 50 years of proven service, *GraLab timers are industry's most accurate and trusted timer.*

VIBRATION MOUNTS

Rectangular Mounts

Consists of rectangular elastomer component bonded with two steel plates. Low installation height provides good stability. Effectively isolates against horizontal and vertical vibrations. Has high deflection capacity in horizontal direction while deflection is low in vertical. Oil and grease resistant. Meets OSHA anchoring standards. Ideally suited for presses, blowers, pumps, vibrators, rolling mills, crushers, etc.

Item No.	Max. Load Lbs.
VP-20	10,000
VP-25	15,000

Industrial Cupmounts

Cupmounts combine protection against severe impact shock with efficient vibration isolation characteristics at frequencies above 40Hz. Can be mounted in any orientation for protection of sensitive electronic, electrical and mechanical equipment from high impact shocks.

Item No.	Load Range Lbs.	A	B	C	D	Approx. E F G

Vibro-Insulator Strips

A continuous strip that has rubber elements. Elastomer is 50 durometer neoprene. Maximum recommended deflection is 3/16 inch which occurs at 50 lbs. per linear inch. Available in 4 inch, 12 inch, 24 inch and 30 inch lengths. Can be cut to meet your applications.

Item No.	Lgth.	Max. Load Lbs.
VM-104	4	200
VM-112	12	600
VM-124	24	1,200
VM-130	30	1,500

Compression Mounts

These mounts are normally used for vertically applied loads to prevent the transmission of noise and vibration caused by rotation of imbalanced equipment. Made with durable oil and ozone resistant neoprene. No special tools required for installation.

Item No.	Load Range Lbs.	A

Neoprene Pad Mounts

Ribbed

Waffle

Provides a versatile, inexpensive way to isolate shock, vibration and reduce noise levels. Simply lift the machine and slide the pads under each foot. They provide firm footing to both floor and equipment. Ribbed pads allow them to be stacked with the ribs at 90 degree angles to each other or nested rib in groove. Ribbed pads are scored in 2" squares for easy cutting. Oil resistant.

Item No.	Type	Size	Load Range psi	Thickness

PM-3*	Ribbed	24 x 24	1-25	5/16

VIBRATION MOUNTS

Elastomer bumpers provide excellent resistance to chemicals and humidity. Durability is 20 times greater than urethane, 10 times greater than rubber and 500 times greater than coiled steel springs. Maintains excellent resilience at extreme temperatures and remains flexible with no material degradation between -80 and +300 degree Fahrenheit. Mounting screws not included.

Low Energy Absorption Longer Stroke, Soft Stop

Bonded Mounts

These one piece mounts protect against shock and vibration. Designed for multi-directional vibration isolation, shock attenuation and noise reduction due to structure borne vibrations. These one piece, fail safe mounts (when used with recommended snubbing washers) are easy to install and provide consistent performance. The resilient material is natural rubber. Core is steel. Temperature range is -40 to +180 degree Fahrenheit and is ozone resistant. The use of the snubbing washers listed below is recommended to ensure proper static and dynamic loading of the isolator and the supported equipment under severe shock environments. Snubbing washers are made from low carbon steel with zinc plate. Bolt not included with mount. Recommended bolt grade 8 or better.

Center Bonded Mounts Two Piece - Neoprene

Designed for heavy duty applications where there are dynamic forces in multiple directions. These are two-piece installed through a mounting hole in a support structure. The mounts are fail safe when used with snubbing washers. Snubbing washers not supplied. 50 durometer.

TOOLING & CONSTRUCTION BALLS

These high quality tooling and construction balls provide a precise reference point for critical machining operations. The standard and shoulder type listed below are available with slip fit or light press fit shank diameters. Slip fit shank tolerance is $\pm .0000/- .0004$ ". Press fit shank tolerance is $\pm .0003/- .0000$ ". Ball and shank are concentric within $.0002$ " T.I.R.

Hardened ground steel. Shoulder tooling balls have a knurled shoulder. The weld between the ball and the shank is designed so the ball will fall off if subject to unusually heavy lateral force. This prevents set up and inspection errors that may occur because of a bent shank.

FIXTURE & CHECKING BALLS

Stainless steel is 440-C and hardened to RC 55-58. Tungsten carbide has only 1/3 the thermal expansion and is ten points harder than stainless steel. The weld or brazing between the ball and shank is designed so the ball will fall off if subjected to an unusually heavy lateral force. This prevents set up and inspection errors that may occur because of a bent shank. Maximum eccentricity, ball to shank, is .0002" T.I.R.

Checking Ball with Reference Shoulder and Tapped Shank Two Piece Welded Construction

This checking ball can be pulled into a hole without applying pressure on the ball. This is done by using a cap screw in the tapped hole in the shank.

JFB-29021	ZZ348	Checking Ball w/Reference Shoulder & Tapped Shank

Inspection Balls One Piece Construction

TE-CO

These premium short shank inspection balls are used as reference points for inspection applications in conjunction with coordinate measuring machines to accurately measure the work piece. One piece construction. Made of 8620 steel, case hardened. Concentricity of ball to shank is .0001 T.I.R.

BALL LOCK MOUNTING SYSTEM

	Material	Heat Treat	Finish
Shanks	4340	RC 40-45	Black Oxide
Bushings	4340	RC 50-54	Black Oxide
Liners	52100	RC 62-64	Black Oxide

Designed to speed accurate locating and locking of fixture plates and subplates. The system consists of three parts: a locating shank, a liner bushing (either primary or secondary) and a receiver bushing (either back mount or face mount). Once installed, tightening the locking shank provides considerable holding power and up to +/- .0005" repeatability.

Each top plate should have one ball lock mount as a primary reference point and one as a secondary point spaced as far apart as possible. Additional shanks can be added to provide additional hold down force, however, omit the liner bushing in these holes. For repeatability of +/- .0005", both of the liner bushings in the fixture plate should be primary liners. The center distance of the reliever bushings in the subplate should be +/- .0002". For repeatability of .0015", use one primary and one secondary liner bushing. The center distance tolerance should be +/- .001".

Installation instructions are included with bushings.

Two styles of receiver bushings are available. Generally, the bolt-in recessed receiver bushing is utilized in blind hole applications (slip fit). The reverse mount receiver bushing is used in through hole applications (light press fit). Installed bushings should be approximately .012" below subplate surface. To avoid binding on the back mount style, the maximum interference fit between the bore and bushing OD should not exceed .0005". Three Grade 8 mounting bolts are included with the bolt-in recessed bushing. Installation instructions are included with both styles.

PINS, BUSHING & LINERS

Locating Pins Press Fit - Flangeless

United Drill Bush

Made in round and relieved styles for locating. Do not require bushings or counterboring. Round pins are used to locate from hole to hole in workpiece. Relieved pins locate radially around the hole or round pin and avoid binding when loading or unloading while still maintaining accurate locations. Made from stress proof C1144 steel, hardened to RC-60-64.

Bullet Nose Pins ACTEK MFG & ENG

The round and relieved pins are used together, along with matching bushings, to align two pieces of a fixture. The pin shank diameters and the bushing OD's are the same size so the fixture pieces can be drilled at the same time for greater accuracy. Heat treated and ground.

*Nylon Patch

Note: Plungers with nylon locking element are not recommended for use in aluminum applications.

Note 2: End force for Inch is in Lbs. End force for Metric is in Newtons.

For use in fixtures, jigs, detents, dies and other tooling applications. They give sure and positive spring tension. Steel noses are case hardened. Black oxide finish. Stainless steel is passivated. Accurate spring pressures. Nose ends accurately radiused. Delrin nose offers long life and high resistance to repeated impacts, moisture and solvents and heat up to 190 degree Fahrenheit. The plastic nose is used where it is important not to mar metals such as aluminum or brass. The plunger end of the plastic nose spring plunger is high tensile thermosetting plastic. Has self-lubricating surface. Metric dimensions are shown in millimeters, metric end forces are shown in Newtons.

The Long-Lok thread lock provides additional resistance to vibration. The resilient nylon insert is squeezed like a wedge between the thread of the plunger and the fastening component, providing extremely high loosening torque. The Long-Lok thread lock does not require initial tension or any defined position so that it is secure in every position. All plungers are pressure and function tested. The steel plungers have a black oxide finish. Steel noses are made of hardened steel. Stainless steel plungers have a natural finish. Stainless noses are made of hardened stainless steel. Metric dimensions are in millimeters. Metric end pressures are in Newtons.

TOOLING AND POSITIONING

STUBBY SPRING PLUNGERS

Stubby Spring Plungers
Inch and Metric

Vliier

Steel

Stainless Steel

Combines the short body of a ball plunger with the long nose of a spring plunger. Used where space is restricted, but where appreciable plunger travel and high end pressures are required. Plunger telescopes completely. Class 2A threads. Permits use where mating surfaces must be flush. Steel noses are case hardened. Stainless passivated. Delrin nose offers long life and high resistance to repeated impacts, moisture and solvents and heat up to 190 degree Fahrenheit. Delrin plunger has electrical insulating properties and will not mar soft metals such as brass and aluminum. Self-lubricating surface. Metric dimensions are in millimeters. Metric end forces are shown in Newtons.

SPRING PLUNGERS

Posi Hex Spring Plungers Inch and Metric

Posi-hex plungers allow for easy installation and removal from the back side using a hex wrench. Plunger assembly will not come apart under critical applications because the hex plug is permanently installed and cannot break loose upon installation or removal. Posi-hex is recommended for use in high torque applications. Metric dimensions are in millimeters. Metric end pressures are in Newtons.

Spring Plungers Inch and Metric Short with Extended Travel

The "short" spring plunger with extended travel provides the space saving features of a short body, along with the added nose travel of the standard length plunger. The nose travel (C column) and the diameter (D column) are identical to the standard spring plunger, with spring pressures mid range between the light and heavy "short" spring plunger. All "short" style plungers have the solid screw driver slot.

TOOLING AND POSITIONING

SPRING PLUNGERS

Hi-Life Flat Hexagonal Nose Steel Body and Steel Nose

Guaranteed for 10 million cycles. Built to take the tough abuse of high speed, long run stamping operations. Flat hexagonal nose design makes them ideal for use as parts lifters in dies, or other applications requiring exceptionally long life. Special long life springs. Bodies black oxide finish. Nylon locking element. Not recommended in aluminum applications.

Item No.	MFG #	A	B	C	E	Initial End Force	Final End Force
HL-1	HT54N	1/4-20		.078	1/8	1/2	6 1/8
HL-2	HT56N	3/16-18	1.406	.088	1/8	1/2	8

HL-4	HT60N	1/2-13	1.718	.105	1/4	1/2	16

Note: End force for inch is in Lbs.

Long Travel - Hex Nose Steel Body

Vliier

For use in large sheet metal forming dies. The long plunger stroke lifts the formed sheet clear of the permit access for easy removal. Hexagonal shaped plungers provide for easy insertion, adjustment or removal with a standard wrench. Plungers are case hardened. Bodies and heavy end pressure plunger noses have a black oxide finish. Light end pressure plunger noses have a zinc plated finish. All bodies have a nylon locking element and are not recommended in aluminum applications.

PRESS-FIT SPRING PLUNGERS

Steel or Stainless Steel Body
With Steel or Stainless Steel Nose
Vlier

Easy installation for use in wood, soft plastic or aluminum. No thread adjustment. Withstands high temperature. Longer travel. Steel body and plunger are made from 12L14 steel. Plunger is case hardened to Rc 50-55. Stainless body and plunger are 300 series. Spring is 17-7 stainless for both styles.

HAND RETRACTABLE SPRING PLUNGERS

Hand retractable spring plungers permit the plunger to be easily withdrawn and re-engaged by pulling on the handle. Hardened plunger permits greater side loading and the tapered end on the plunger allows for easy alignment. Used on original equipment and machining applications as positioners, locating pins, indexing devices, etc. Steel are zinc plated and stainless is Type 303 or equivalent. On ring handle stainless models, all parts are stainless except the ring handle which is nickel plated steel. Locking types have a rest position where the plunger can stay in the retracted position. Nylon locking element not recommended for aluminum applications. Metric dimensions are in millimeters. Metric end forces shown in Newtons.

HAND RETRACTABLE SPRING PLUNGERS

Hand retractable spring plungers permit the plunger to be easily withdrawn and re-engaged by pulling on the handle. Hardened plunger permits greater side loading and the tapered end on the plunger allows for easy alignment. Used on original equipment and machining applications as positioners, locating pins, indexing devices, etc. Steel are zinc plated and stainless is Type 303 or equivalent. On ring handle stainless models, all parts are stainless except the ring handle which is nickel plated steel. Locking types have a rest position where the plunger can stay in the retracted position. Nylon locking element not recommended for aluminum applications. Metric dimensions are in millimeters. Metric end forces shown in Newtons.

HAND RETRACTABLE SPRING PLUNGERS

Hand retractable spring plungers permit the plunger to be easily withdrawn by pulling on the handle. Used in machining applications as positioners, leading pins and indexing devices. Threaded end is designed to accept any internally threaded knob or handle. Locking plunger can be withdrawn completely into the body and locked in a fully retractable position. To engage the plunger, simply turn the end knob to line up with the slot in the body. Radiused delrin and phenolic noses prevent marring of aluminum, brass or other soft materials. Available in zinc plated steel or stainless steel. Metric dimensions are in millimeters, except for dimension E. Metric end forces are in Newtons.

HAND RETRACTABLE SPRING PLUNGERS

Hand retractable spring plungers permit the plunger to be easily withdrawn and re-engaged by pulling on the handle. Hardened plunger permits greater side loading and the tapered end on the plunger allows for easy alignment. Used on original equipment and machining applications as positioners, locating pins, indexing devices, etc. Steel are zinc plated and stainless is Type 303 or equivalent. On ring handle stainless models, all parts are stainless except the ring handle which is nickel plated steel. Locking types have a rest position where the plunger can stay in the retracted position. Nylon locking element not recommended for aluminum applications. Metric dimensions are in millimeters. Metric end forces shown in Newtons.

TOOLING AND POSITIONING

HAND RETRACTABLE SPRING PLUNGERS

Hand retractable spring plungers permit the plunger to be easily withdrawn by pulling on the handle. Used in machining applications as positioners, leading pins and indexing devices. Threaded end is designed to accept any internally threaded knob or handle. Locking plunger can be withdrawn completely into the body and locked in a fully retractable position. To engage the plunger, simply turn the end knob to line up with the slot in the body. Metric dimensions are in millimeters, except for dimension E. Metric end forces are in Newtons.

INDEXING PLUNGERS

These indexing plungers are spring loaded to work in a wide variety of uses in both tooling and equipment. The body is steel with black oxide finish. Plunger is hardened and ground. The knob is black matte plastic. Stainless is Type 303. Locking types have rest position where the plunger can stay in retracted position. Lock nuts sold separately. Metric dimensions are in millimeters, metric end forces are shown in Newtons.

INDEXING PLUNGERS

Used to prevent any change in locking position due to shearing force. These are spring loaded for use in fastening, locating and indexing on equipment, tooling and other applications. The plunger can be easily withdrawn by pulling on the handle. Locking types have a rest position where the plunger will stay in the retracted position. The knob is black thermoplastic. Steel type has a black oxide finish. Stainless is Type 303 or equivalent.

CAM ACTION INDEXING PLUNGERS

These spring loaded action indexing plungers are used in many tooling applications as well as on many types of machinery and equipment. The plunger is retracted as the handle is turned on the cam of the body. A groove on the top of the cam locks the plunger into the retracted position. The body of the plunger is made of steel with black oxide finish. The plunger is made of steel, ground and nitrided. The mounting block is made from steel with black oxide finish and allows for greater mounting flexibility.

Indexing Plungers with Mounting Plate Locking and Non-Locking

JW Winco

These indexing plungers are spring loaded to work in a variety of applications on both tooling and equipment that require surface mounting. The body is steel with black oxide finish. Plunger is hardened and ground. The knob is black matte plastic and the mounting plate is zinc die cast and zinc plated. Locking types have a rest position where the plunger will stay in the retracted position. Metric dimensions are in millimeters, metric end forces are shown in Newtons.

Provides fast installation or removal of spring, ball or stubby spring plungers (including metric). Prevents spring damage that can result when a screwdriver is used on the ball or plunger end. A real convenience and time saver.

*No thread relief

PUSH-FIT BALL PLUNGERS

Push fit ball plungers can be used when a threaded ball plunger is impractical or when threaded adjustments are not required for detent. Easy installation for use in wood, soft plastic or aluminum. Steel are made 12L14 steel with black oxide finish. Stainless bodies are Type 303, stainless balls are Type 440.

Ball plungers are compact units ideally suited for many locating or positioning applications in dies, special tooling, automatic feed devices, etc., where controlled end pressure is required. Nylon balls offer resistance to repeated impacts, moisture and solvents. Also resists heat up to 190 degrees Fahrenheit and offers electrical insulating properties. Will not mar soft surfaces such as brass or aluminum. Stainless type have stainless bodies and are available with stainless steel or nylon balls. End pressures are shown in pounds for inch sizes and Newtons for metric sizes. Metric dimensions are shown in millimeters. Steel bodies are coded to indicate end force; silver = light end force; black = standard end force; gold = heavy end force. Stainless steel bodies are color coded on the rear of the assembly to indicate end forces; plain = light end force; black = standard end force; orange = heavy end force.

*Sizes 1/4-20 and smaller will have a Nylon Patch. Sizes greater than 1/4-20 will have a Nylon Plug.

Note: Plungers with nylon locking element are not recommended for aluminum applications.

BALL PLUNGERS

Ball plungers are compact units ideally suited for many locating or positioning applications in dies, special tooling, automatic feed devices, etc., where controlled end pressure is required. Nylon balls offer resistance to repeated impacts, moisture and solvents. Also resists heat up to 190 degrees Fahrenheit and offers electrical insulating properties. Will not mar soft surfaces such as brass or aluminum. Stainless type have stainless bodies and are available with stainless steel or nylon balls. End pressures are shown in pounds for inch sizes and Newtons for metric sizes. Metric dimensions are shown in millimeters. Steel bodies are coded to indicate end force; silver = light end force; black = standard end force; gold = heavy end force. Stainless steel bodies are color coded on the rear of the assembly to indicate end forces; plain = light end force; black = standard end force; orange = heavy end force.

*Sizes 1/4-20 and smaller with have a Nylon Patch. Sizes greater than 1/4-20 will have a Nylon Plug.

Note: Plungers with nylon locking element are not recommended for aluminum applications.

Posi-hex plungers allow for easy installation and removal from the back side using a hex wrench. Plunger assembly will not come apart under critical applications because the hex plug is permanently installed and cannot break loose upon installation or removal. Posi-hex is recommended for use in high torque applications.

BALL PLUNGERS

Ball Plungers
Hexagon Socket Style
With Long-Lok Thread Lock
Inch or Metric
Kipp

The Long-Lok thread lock provides additional resistance to vibration. A resilient nylon insert is squeezed like a wedge between the thread of the plunger and the fastening component, providing extremely high loosening torque. The Long-Lok thread lock does not require initial tension or any defined position so that it is secure in every position. All plungers are pressure and function tested. The steel plungers have a black oxide finish. Steel noses are made of hardened steel. Stainless plungers have a natural finish. Stainless noses are hardened. Metric dimensions are in millimeters. Metric end pressures are in Newtons.

Delrin Body
Stainless Steel and Nylon Ball
Vliier

For use in plastic applications or when situation requires as few metal parts as possible. Excellent when electrical isolation is necessary. Highly durable Delrin body and stainless steel spring allows use in corrosive environments. Plunger wrenches will not work with this style.

SPRING LOCATING PINS

To determine mounting hole locations, use the following formula: $L = S/2 + W + X$

To determine the proper thickness of the workpiece, use the following formula: $Y > (C - B/2)$

L = Location
S = Diameter of locating pin
W = Width of workpiece
X = See chart
Y = Height of workpiece

These spring locating pins are used for positioning parts against fixed locators to insure proper contact. Their compact design makes them especially helpful when clamping small parts or for use in tight spaces. They also help hold the part during the set up operation. The sleeve is aluminum, spring is steel and the pressure pin is steel or plastic. The seal helps keep out coolant and other contaminants. Metric dimensions are in millimeters.

Spring Locating Pins With Steel Plastic or Stainless Pin

These spring locating pins are designed for fixturing small parts in tight or compact space. Ideal for positioning and chucking flat parts and round parts for profile clamping. Bodies are made of aluminum and are available with steel, stainless steel or plastic pins. Steel pins are case hardened and zinc coated. Plastic pins are made of delrin. Steel and plastic pin locators with seal have steel springs. Stainless locators with seal have Type 304 stainless pin with cast nylon spring and aluminum body. Available with or without seals. Pins with no seal have neoprene inside rather than a spring. Pins with seal recommended for applications involving any fluid or liquid.

See page ### for installation tools and liners.

These spring loaded pull pins allow you to quickly retract and engage the plunger for locating, fastening and quick change operations. They consist of two parts which include a housing (barrel) and a plunger assembly. The plunger assembly screws into the housing. The housing is designed to be welded into place for strength. Pulling on the handle of the plunger assembly retracts the plunger into the housing. Releasing the handle allows the spring loaded plunger to extend. The lockout style allows you to pull and rotate the handle ¼ turn to hold the plunger in the retracted position. The style without handles features a 3/8-16 threaded end so the user can add a different handle or other method of actuation. The zinc plated steel plunger assemblies are made from C1038 steel on all sizes except the 5/8 which is made from 12L15 steel. The steel housing is made from 12L15 steel for welding to the fixture and is not plated. The aluminum housings are made from 6061-T6. The stainless steel models (plunger assembly and housing) are made from Type 303 stainless steel. Pull up force is approximately 5 lbs. Handles are made from black plastic.

Adjustable Clamping Pins

Spring Loaded

Fairlane Products

These spring loaded adjustable clamping pins allow for quick clamping and release. Once the pin is engaged, turning the knob allows the pin to tighten down on the work piece or further extend the plunger in the locating hole. Because it can be quickly adjusted, it is ideal for applications where there is variance in the part being held. Pulling up on the handle retracts the plunger fully into the housing. The set screw on the housing allows you to lock the plunger at a set depth for repeated operations and prevents the mechanism from coming out of the housing. Plunger is made from 1038 steel providing a tensile strength of 90 to 95 KSI. These can be heat treated for greater strength as specials. The housing is made from 12L15 steel for welding to fixture.

Item No.	MFG#	A	B	C	D	E	F	G	Adjustment

BSD-15	CP-C200P	1/2	9/16	3/4	1 1/8	1/2	1 1/8	2 1/4	5/8

SPRING LOADED CATCHES

Provides quick release of sliding parts. Optional hold open feature available. Hold open feature operates by turning knob 90 degrees and plunger will remain in retracted position. Simply turn knob back 90 degrees to release. Working shear loads for all plungers are 400 lbs. when installed in steel panels, 300 lbs. for aluminum panels.

Spring Loaded Catches Press In

Southco Inc.

Press in plungers are made of 1006 steel, case hardened, bright nickel plate. Install by pressing knob with approximately 3,000 lbs. for steel and 1,500 lbs. for aluminum panels until ferrule sits flush with panel. A solid back up tool must be used for proper installation.

Item No.	MFG #

Stock Crowders

Vliier

Provides positive alignment of stock in dies and fixtures. Saves pilots and is easily removed when dies are to be sharpened. Handles stock as thin as .010" and width variation up to 1/16". Thinner material can be handled by setting stock pusher in counter bore. Simple to mount - only requires one tapped hole.

Item No.	MFG #	Force Lbs.
PL-4	PL4	2 or 4
PM-4	PM4	3 or 6
PH-4	PH4	5 or 10

Note: To assure that the proper force will be applied, locate tapped hole .407 from edge of stock (for 2, 3, and 5 lbs.) or .376 from edge of stock (for 4, 6 and 10 lbs.)

Gauge Stops Adjustable - Internal Locking

Rolar Products

Speeds layout and set up by eliminating exact position locators as well as the need to remove the die or fixture for adjustment. The spring loaded pin completely retracts into the gauge body. Easily installed by drilling at an approximate location and dropping in the stop. Adjusts by rotating. Tightening the set screw forces the ball outward, locking the gauge in position.

Item No.	MFG #	Installation Data				Max. Adjustment	D

TORQUE HANDLES & THUMB SCREWS

Torque thumb screws have many holding applications in the construction of jigs, fixtures and other special tooling. They are used extensively in supporting parts against cutting tool thrust. The controlled end pressure prevents over-tightening - the result being that spoilage due to deflection is eliminated. The head of the screw turns freely when the preset end pressure is reached. Backing off action is positive, assuring speedy unloading of fixture or tool. A spring-controlled ball-check design in the head release mechanism is perpendicular to the screw axis assuring accurate end pressures, long life and no wobble. The head design prevents chips and dirt from reaching the working parts. A Truarc retaining ring secures the knurled ring in place. Removal of Truarc ring permits quick disassembly. Check nut furnished with each torque screw. Check nut prevents backing off during operation due to chatter or vibration. Black oxide finish.

For controlling forward pressures on jigs, fixtures, machinery, etc. End pressure adjustable. Hex wrench adjustment in head permits holding forces to be varied as needed. Instructions supplied with each shipment.

TOOLING AND POSITIONING

KNOBBS, INSERTS & SCREW CLAMP SYSTEMS

Quick Acting Knobs - Inch and Metric

Northwestern Tools

For faster clamping. Tilt knob and it will slide in or out. Straighten knob and threads will engage for clamping. Many tooling applications. Made from powdered metal.

Item No.	MFG #	Thread Size	A	B	C	D

Insert Locking Nuts

Northwestern Tools

Used for locking quick acting inserts in position. Heat treated steel. Black oxide finish.

Swivel screw clamps can be constructed by pairing any of the bodies with any of the pads. All pads swivel 10 degrees from vertical and have left hand threads to prevent backout. Clamping screws are made from 12L14 steel with a black oxide finish. Knob style is aluminum with the stud press-fitted in. Pads are case hardened, black oxide finish. Bodies and pads must be ordered separately.

GRIPPERS

Eliminates costly maintenance and chuck jaw replacement. After long periods of maintenance-free service these inserts can be quickly replaced at low cost. Replacement can be accomplished right at the machine without costly downtime. Applicable to most chuck jaw designs. Held in place either by being threaded (to be held by screws entered through jaw), or flat on side to be held by set screw pressure. Steel type are made from hardened tool steel.

Eliminates costly maintenance and chuck jaw replacement. After long periods of maintenance-free service these inserts can be quickly replaced at low cost. Replacement can be accomplished right at the machine without costly downtime. Applicable to most chuck jaw designs. Held in place either by being threaded (to be held by screws entered through jaw), or flat on side to be held by set screw pressure. Steel type are made from hardened tool steel.

Fine Serrated

Pointed

Carbide Tipped

Simply drill, tap and install. These blind hole grippers make it easy to modify soft tip jaws, strap clamps or fixtures. Grippers can be installed from one side using a combination center drill, tap and wrench, eliminating the need to drill through holes. Hardened steel grippers are case hardened with black oxide finish. Carbide tipped grippers have cadmium plated finish.

SWIVEL ACTION GRIPPERS

Consists of stainless steel ball with pocket area to accept a replaceable gripper and a socket head cap screw to hold the gripper in place. Ball is retained in the hex head housing by an O-ring that facilitates swiveling action and keeps contaminants out. Housing is heat treated alloy steel. Grippers are not included in assembly and must be purchased separately. Any round style gripper or rest pad with a tapped hole can be used (carbide tipped, high speed steel, solid carbide or Delrin). See "D" dimension for gripper diameter to use.

SWIVEL PADS & T-SLOT ACCESSORIES

Toggle or Swivel Pads
With Flat or Serrated Bottom
Steel or Stainless Steel Body

Vliier

Steel Body

Flat Bottom

Serrated Bottom

Available with flat or serrated bottom. Flat bottoms are available in zinc plated steel with steel or delrin pads and stainless steel with stainless or delrin pads. Serrated bottoms are available in zinc plated steel with steel pad or stainless steel with stainless pad. The ball portion is hardened. Pad is not heat treated. Stainless is 300 series.

Slot on the top of the bolt makes it easy to rotate the head in the T-slot. Extra long threaded shank for versatility. Made of 4140 steel. Heat treated to Grade 5 strength (125,000 psi) with black oxide finish.

We Have Production Machinery Parts For Any Industry

We work with many suppliers to give you solutions to fit your budget.

T-Slot Bolts Standard Type Inch and Metric

George H. Seltzer

Used for setting up work on planers, shapers, milling machines or similar applications. Heads sized to fit in table slot. Cannot twist or jam in slot. Inch are hot forged from C-1045 steel, Class 3NC threads. T-slot bolt head dimension "D" is undersized to fit machine table slot. Inch dimensions are +/- .015. Metric are forged, with milled T-slot guide and faces, and rolled thread. Sizes M6 - M12 are heat treated to strength Class 10.9, M16 - M24 are heat treated to Class 8.8. Metric dimensions are in millimeters.

See page 264 for flange nuts.

T-Slot Bolts Standard Type

TE-CO

Holds work more securely than ordinary bolts. Eliminates damage to table slots. Made of medium carbon alloy, heat treated, black oxide finish. Threads are Class 2A UNC.

T-SLOT NUTS

Chamfered Type Metric - DIN-508

Cold drawn T-nut features unique undercut to prevent interference from T-slot burrs. Stud stays perpendicular to the table. Bottom chamfer (approximately 60° off horizontal) clears chips for easy insertion. Threads are roll formed for more holding power and last thread is incomplete to prevent T-slot or table damage. Made of cold formed steel, case hardened, black oxide finish. Tempered to tensile strength Class 10.

Unique rotary T-nuts allow convenient addition of studs and clamp straps without tearing down previous set ups. Made of cold finished steel, case hardened, black oxide finish. These T-nuts feature a safety design which is tapped one thread short of going through to prevent the stud from being screwed into the table. Metric dimensions are in millimeters. Metric style are chamfered on bottom.

Hardened Hexagon Nuts

Used extensively on tool, jig and fixture work. Also used with studs, T-bolts, etc. for machine setups. Precision tapped. Case hardened. Black oxide finish. National coarse are heavy pattern. National fine are light pattern.

T-Slot Nuts
Standard Type
Steel or Stainless Steel

Used for setting up work on machine tools. Also used with stud sets and have many applications on jig and fixture work. Tongue of T-nuts slightly undersize to fit machine table slot-A. Steel type are made of cold finished steel, case hardened, black oxide finish. Stainless is Type 304. The standard T-nuts are threaded completely through. The safety design is tapped one thread short of going through to prevent the stud from being screwed into the table.

NUTS

Collar or Flange Nuts Steel and Stainless Steel

Contact surface of flange is flat. Steel type are made from cold finished steel, case hardened with black oxide finish. Stainless is Type 303. Metric are tempered, tensile strength Class 10. Metric dimensions are in millimeters.

Steel washers are made of cold finished steel and case hardened. Black oxide finish. All are machined flat and parallel. Stainless are made from Type 303 stainless steel.

Heavy Duty Stamped Flat Washers Steel

Reid Select

Precision fine blanked washer. Heat treated, black oxide finish. Available in steel only. Tolerance: I.D. +/- .010", OD, thickness and flatness is .005" maximum on the inch only. Metric are tempered to 1200-1400N/mm2 tensile strength. Metric dimensions are in millimeters.

Heavy Duty Square Flat Washers Steel and Stainless Steel

Reid Select

Provides more surface area contact than round washers. Used for shimming machinery, construction applications and anywhere an extra large washer is needed. Steel washers are made from 1018 steel and case hardened with a black zinc finish. Stainless steel washers are made from Type 304 stainless steel.

Contains 57 pieces in a strong metal holder that can be mounted or can stand on a bench.

Kit includes:

- Six T-slot nuts
- Twenty-four studs - four each of 3", 4", 5", 6", 7" and 8" lengths
- Four flange nuts
- Four coupling nuts
- Twelve step blocks
- Six step clamps
- One T-slot cleaner
- One metal stand

The steel rod ends are a quality drop forged part with the average properties of C-1035 natural hot rolled steel. 75,000 to 85,000 lbs. psi tensile, 40,000 to 55,000 lbs. psi yield. They are supplied three ways: blank, milled and drilled or threaded. The stainless rod ends are made from forged Type 316 stainless steel.

Note: Head Thickness (D dimension) is for blank only. Milled and drilled and threaded D dimension will be slightly undersized.

Swing Eye bolts
Partially or Fully Threaded
Steel or Stainless Steel

Valtra

Partially Threaded

Fully Threaded

Made of heat-treated alloy (125,000 psi) steel with black oxide finish or Type 300 series stainless steel. Have many applications in the construction of machinery, jigs, fixtures and other tooling. Fully threaded eye bolts allow you to shorten the shank without sacrificing thread length. Metric dimensions are in millimeters.

SETUP STUDS

Standard Style
Steel and Stainless Steel
Inch
Northwestern

The steel inch studs are made of stress proof steel to ASTM A 311 class B. Yield strength is 100,000 psi, tensile strength is 125,000 psi. Stainless studs are made from Type 303. The metric studs are made of steel with rolled threads. Sizes M6-M12 are heat treated to strength Class 10.9. Sizes M16-M24 are heat treated to Class 8.8. All Steel studs are black oxide finish.

Note: R = Spring rate, lbs./inch deflection 20%
D = Max. recommended deflection - 35% L
T = Approximate total load at max. deflection ±20%

Neoprene elastomer springs have proven to be the safest, most efficient and reliable compression material for punching, stamping and drawing dies. Major advantages include higher loads, increased durability, better performance, no maintenance and very long life.

Urethane Springs Harkness Ind..

These urethane springs are designed for use in applications where corrosion, vibration and magnetism prevent the use of conventional steel springs. They replace steel coil springs in medium pressure applications involving space limitations, high blank holding pressure and adequate stripping. Durometer 95 shore A. Color black. Tensile strength 5,000 psi. Temperature range -40 to +180 degrees Fahrenheit.

Spring Anchors Century Spring Corp.

Spring anchors offer an economical way to secure the ends of extension springs, and provide easy adjustments. Available in C-12114 steel with a black oxide finish or 300 series stainless steel.

Constant-Force Springs Century Spring Corp. Stainless Steel

Well suited to long extensions with no load build up. The spring is usually mounted with the ID tightly wrapped on a drum and the free end attached to a loading force such as a counterbalance. Load capacity can be multiplied by using two or more strips in tandem, back to back or laminated. In use, be sure to leave at least 1 1/2" coiled on the drum at full extension. The spring ID will wrap tightly on the drum so that most applications require no fastening to the drum. Made from Type 301 stainless steel.

Torsion Springs Lee Spring Stainless Steel

Widely used to store and release energy of rotation or to maintain a pressure over a short distance. Normally used over a supporting mandrel or arbor. The suggested mandrel sizes below allow about 10% clearance at the deflection listed. Sufficient room (minimum axial space) must be provided in the assembly for the spring to function properly. These springs should be used in the direction that winds the coils. Torque values listed are recommended maximum torques. For inspection purposes, the load should be applied at 1/2 leg length (A). These values can be increased 20% for static conditions with only slight setting. Type 302 stainless, plain finish. (ASTM-A313 or AMS-5688).

Long Length Compression Springs

36 Inch Steel and 20 Inch Type 300 Series Stainless Steel

Century Spring

Long length compression springs can be cut to create a custom length spring. End coils may be bent back to touch the previous coil to create a squared end. Available in 20" long stainless steel or 36" long carbon steel. The constant divided by the number of coils equals the load rate per inch.

Drawbar springs have long steel loops that pass through the center of the spring and hook around to opposite end, thus compressing the spring upon loading. This design produces physical extension stops to prevent unexpected overloading and fracturing while continuing to hold a static load. Available in zinc plated spring steel or stainless steel. The rate lbs./in. listed below indicates the pounds needed to pull out the first inch of the spring. For example, if the rate is 25 lbs. it will take 25 lbs. to pull out the first inch, 50 lbs. for the second inch, etc.

Conical Compression Springs

Tapered
Stainless Steel Type 302
Century Spring

Cone shape Type 302 stainless steel. Coils can be designed to nest within each other when deflected, providing a nearly constant rate, and a solid height lower than a normal compression spring. Ends are closed. Starting rate is the same as rate per inch.

OD						OD						OD

Long Length - Individual Springs

Century Spring

Long length extension springs can be custom cut to length. End coils can be bent into hooks or loops. Available in 11" music wire, 20" Type 302 stainless steel or 36" carbon steel.

Spring Looping Tool

Hook-Kon spring looping tool forms a variety of perfect end loops and hooks on coil springs, 1/8" to 1/2" OD.

Item No.	MFG#	Description
SW-104	1870	Hook-Kon Spring Looping Tool

Spring Winder

The spring winder quickly winds extension, compression and torsion springs from 1/8" to 1 1/4" inside diameter in either right or left hand coils. Handles music wire from smallest to 3/16" diameter A pitch gauge accurately regulates distance between coils and may be disengaged while winding extension springs or closed end coils on compression springs.

SW-101 Spring Winder Kit: Includes spring winder with cam lock tension release, two handles, one for large diameter and one for small diameter mandrels. Six mandrels, 1/8", 1/4", 3/8", 1/2", 5/8", and 3/4", wrench, four 1/4 lb. coils of .029", .047", .067" and .085" spring wire. Also includes Hook-Kon spring looping tool and nipper.

SW-102 Spring Winder Kit: Same as above but does not include Hook-Kon spring looping tool and nipper.

SW-103 Utility Model: Same as SW-102 but it does not have cam lock tension release or small handle. Four mandrels 1/8", 1/4", 3/8" and 1/2", with wrench. Spring wire not included.

Heavy Duty	Gold	30%	15% to 25%
Extra Heavy Duty	Green	25%	15% to 20%

Marathon Sales

Century Spring

Made from vapor degassed high tensile strength chromium alloy steels. Spring ends are ground square. Designed for long life cycle with constant high-speed deflections and shot peened to increase fatigue life. Load A is the load (in lbs.) at 1/10 inch deflection. Load B is the load (in lbs.) at maximum operating deflection which is 40% for medium duty, 30% for medium-heavy duty, 25% for heavy duty and 20% for extra heavy duty.

CROSSED ROLLER SLIDE ASSEMBLIES & ACCESSORIES

Del-Tron Low Profile Crossed Roller Slide Tables

Crossed roller slide tables are factory assembled and ready to install. They use crossed roller bearings to provide very precise linear motion with low friction and high support stiffness for the load. A large selection is available for applications including precision instruments, office and communications equipment, surface grinders, tool grinders, assembly fixtures, and anywhere precise linear positioning is required. Precision ground "V" grooved ways and rollers provide high accuracy and load capacity. Withstands forces in any direction from alternately crossed rollers at 45 degree angle. Contain UNC threaded mounting holes in standard pattern for easy installation. Interchangeable with other manufacturers slides. Straight line accuracy .0001" inch of travel. .0001" position repeatability. All have light weight aluminum carriage. Steel type has hardened steel crossed roller rail set with double V grooved inner rail. Stainless steel type (DT-432 and 445) has stainless steel rollers, cages and fasteners.

Del-Tron Crossed Roller Slide Tables

Crossed roller slide tables are factory assembled and ready to install. They use crossed roller bearings to provide very precise linear motion with low friction and high support stiffness for the load. A large selection is available for applications including precision instruments, office and communications equipment, surface grinders, tool grinders, assembly fixtures, and anywhere precise linear positioning is required. Precision ground "V" grooved ways and rollers provide high accuracy and load capacity. Withstands force in any direction from alternately crossed rollers at 45 degree angle. Standard pattern for easy installation and interchangeability with other manufacturers slides. Straight line accuracy .0001" inch. Each table consists of a one piece base, a one piece carriage and a pair of linear bearings. Steel type has cold rolled base and carriage with black oxide finish. Ends of carriage contain tapped holes that permit easy attachment of way covers, bellows or other shields to exclude dust and keep the ways clean. Aluminum is available for situations where particulate contamination must be reduced. Aluminum crossed roller slide tables have a gold anodized carriage and black anodized base.

CROSSED ROLLER SLIDE ASSEMBLIES & ACCESSORIES

Del-Tron Crossed Roller Rail Sets

Crossed roller linear rail sets are compact, precision bearings that can support and guide high loads with high accuracy and repeatability, low friction, and low starting force. A complete range of sizes is supplied for use in precision machine tools, measuring instruments and anywhere reciprocating motion with high reliability and long life is required. Each bearing consists of a pair of hardened steel ways containing 90 degree "V" grooves and a row of alternately crossed cylindrical rollers. The hardened steel rollers are captive in a stainless steel cage for easy handling, assembly and permanent alignment. The ways are installed face to face on smooth flat and accurately parallel, coplanar, or perpendicular surfaces. Lubrication required depends on the application ranging from light grease for low speeds less than 50 inches per minute to continuous oil bath or mist at 1,200 inches per minute. Temperature of bearings must not exceed 212 degree Fahrenheit even for short periods, as this will reduce hardness and performance. All are steel. Each set consists of two complete bearings (4 way bars, 2 roller cages, and end stops).

Del-Tron Cross Roller Slide Assemblies

For higher load carrying capacity than precision ball slide assemblies and when operating at high cycling rates or with shock and overhanging loads, cross roller slides are used for improved performance. Cross roller slides provide accuracy of .0001" of travel, repeatability .0001" exceeding precision ball slides. Cross roller slides are not as naturally cleaning as ball slides. In operating environments with little or no protection against dust and when heavy loads are not a consideration, consider ball slides.

- Positive stops prevent over-travel
- Rollers improve load capacity 8-10 times that of balls
- Alternately crossed rollers handle force in any direction
- Lightweight aluminum carriage and base
- Interchangeable with many types of ball slides
- Four tapped and threaded carriage holes and two counter bored base holes simplify installation and component mounting

*Has 6 carriage holes. D Carriage Hole Spacing value is minimum centered around mean position.

BALL SLIDE ASSEMBLIES & ACCESSORIES

Del-Tron
Precision Ball Slide Assemblies

These precision linear ball slides have a typical coefficient of friction of .003 and provide straight line accuracy of .0005" per inch of travel. At load capacity, a life of 10 million inches of travel can be expected. The expected life at 1/2 the rated load is 100 million inches.

- Factory preload adjustment prevents sideplay and backlash
- Lightweight aluminum carriage and base with high load capacity
- Four tapped and threaded carriage holes and counter bored base holes simplify installation and component mounting
- Long life, self-cleaning ball bearing needs no lubrication
- Positional repeatability .0002 inch
- Clear anodized finish

SKF
Miniature Profile Ball Rail Guides

Ideal for precision applications where mounting space is limited. Small and lightweight with high load carrying capacity and high speed linear motion up to 3m/second. Gothic arch grooves at the raceway contacts enable the slide to sustain loads and movements from any direction. Height tolerance is +/- .020 mm. Width tolerance is +/- .025 mm. Free of clearance, no preload for applications with constant load and low friction. All parts are stainless steel or plastic for corrosion resistance. End caps have oil holes for easy relubrication. All dimensions are in millimeters.

BALL SLIDE ASSEMBLIES & ACCESSORIES

The Thomson 500 Series Ball Profile Rail Linear Guides provides long life, exceptional rigidity, high dynamic and static load capacities in all direction; accommodates high moment loads; and maintains a high running accuracy. These properties result in improved machine accuracies and rigidity resulting in reduced vibration extending machine and tool life. This has a direct effect on operational efficiency resulting in cost savings for the user. These units are a drop-in replacement for existing linear ball guide systems. The rails are subjected to multiple straightening processes during and after grinding of the ball paths to ensure straight accurate rails. A patented, custom insert molded recirculation path that has an optimized geometric shape and minimal transitions ensures smooth and quiet operation in both low and high-speed operation. Built-in undercarriage, low-drag longitudinal seals protect the balls and ball path from contamination. These longitudinal seals are an added protection to increase the life and overall performance. A special trapezoidal profile maximizes the carriage cross section, resulting in the highest possible rigidity. All ball bearing raceways are hardened to a minimum of 60 Rockwell C.

The carriages are available in standard and narrow profiles, as "clearance" units, which are the most commonly specified type in the market today.

Carriages and rails are available in carbon steel or thin dense, chrome-coated carbon steel and are sold separately.

BALL SLIDE ASSEMBLIES & ACCESSORIES

Thomson
Pillow Blocks
Open Type For Continuously Supported Applications
Single and Twin

- Double acting seals retain lubrication and keep contamination out
- Easily mounted with four mounting bolts
- Built-in lubrication wick for continuous lubrication
- Travel speeds up to 10 ft/s
- 1/2 has lubrication fitting, larger sizes have 1/4-28 access for lubrication

Ball Screws

Thomson
Ball Screws

These ball screws offer over 90% efficiency converting rotary motion to linear motion with low coefficient of friction. When replacing screws, hydraulics or pneumatics, they allow the use of smaller, less expensive drive motors and reduce the need for auxiliary equipment. They also offer dependable accuracy and repeatability at an economical price. Made of high-quality alloy steel hardened to rockwell 56-60C. Lead accuracy of .004 in./ft. Straight within .010 in/ft. and do not exceed .030" in any 6 foot section.

Ball screws are convenient and efficient devices for converting rotary to linear motion. Because of their reliability and high efficiency they are utilized in replacing conventional methods of power transmission. Their high efficiency is developed by using bearing balls to limit friction between the nut and the screw. Unlimited travel is achieved by recirculating the bearing balls through return guides. All ball screws are right hand thread. Made of high quality alloy steel, induction hardened to RC 56-60. Flanges and nut are made of carburized steel with ball tracks heat treated to RC 58-60. Both ball screws and nuts have protective black oxide finish. Ball screws will not deviate from nominal lead by more than .004 inch per foot. Straight within .010 inch per foot. Do not exceed .030" in any 6' section.

BALL/ACME SCREWS, NUTS & ACCESSORIES

Precision Acme lead screws are specifically designed for translating rotary motion into linear travel with accuracy and smoothness that are superior to general purpose Acme screws. Precision Acme lead screws are made from 4140 series alloy steel. Threads are rolled 2-C centralizing design. This thread form prevents wedging between nut and screw if subjected to radical loading. Screws have a minimum hardness of 200 Brinell. Tensile strength is rated at 95,000 psi and lead accuracy is maintained at +/- .003 in./ft. Screw ends are deburred and ready for end machining. Each screw is roller burnished and black oxide to a smooth finish, thereby maximizing travel efficiency. The matching travel nuts are engineered with the same 2-C centralizing thread form. Bronze nuts have ultimate tensile of 65,000 psi and a hardness of RB 75. A lubricated bronze nut has a dynamic COF of .125. The plastic nuts are quieter, more efficient and will equal or exceed the life of conventional travel nut materials. Tensile strength at 70 degree Fahrenheit is 8,000 psi. COF for a lubricated plastic nut is .075 (.160 unlubricated). Loads can be mounted to the travel nut or assembly with steel flanges. These flanges thread directly onto the travel nut. Nut and flange must be secured with a set screw or other pinning device. Application loads can be mounted to the flange via four pre-drilled, equally spaced holes. Mounting holes are .266" in diameter and spaced on the bolt center diameter (BCD) listed below.

TRACK ROLLER ASSEMBLIES & ACCESSORIES

MinVee® Miniature Slide System

MinVee® is a low profile, miniature linear slide system ideal for semi-conductor, laboratory, medical and packaging applications. The non-actuated MinVee® linear slide consists of one or more 6061-T6 anodized aluminum wheel carriage with your choice of DualVee® integral studded wheels (steel/shielded, steel/sealed or polymer/shielded), and double edge track from 6.5 to 36.5 inches. The steel wheel carriage supports loads to 121 pounds while the polymer carriage is capable of up to 15 pounds. MinVee® features stainless steel lubricators, and a patented self-aligning mounting shoulder, reducing installation time and cost. Parts are sold separately. Please specify wheel carriage model and quantity, track (lengths), and number of track support spacers (one per mounting hole).

Channel

CR Series (composite stainless steel) features heat treated stainless steel track mounted to an extruded aluminum base, and stainless steel wheels with sealed bearings in sizes 1, 2 and 3. CR Series offers corrosion resistance for load requirements up to 5,739N, speeds to 5.5 m/s and acceleration to 5 g's. Vee style only.

TRACK ROLLER ASSEMBLIES & ACCESSORIES

Stud Track Rollers - XD15NW Stainless Steel

These track rollers are made of XD15NW Stainless Steel that is more robust than the standard 440C Stainless Steel in terms of load capacity, hardness, corrosion resistance and fatigue resistance. They can be used in markets like industrial automation, aerospace, food packaging, automotive assemblies, welding, fixtures and CNC machining.

Item No.	A	B	C	D	F	Torque (in-lb)	Static Load Cap. (lbf)	Dynamic Load Cap. (lbf)	Speed Limit (rpm)

Yoke Track Rollers - XD15NW Stainless Steel

These track rollers are made of XD15NW Stainless Steel that is more robust than the standard 440C Stainless Steel in terms of load capacity, hardness, corrosion resistance and fatigue resistance. They can be used in markets like industrial automation, aerospace, food packaging, automotive assemblies, welding, fixtures and CNC machining.

Item No.	A	B	C	Static Load Cap. (lbf)	Dynamic Load Cap. (lbf)	Speed Limit (rpm)
CCF-XDY24S	0.750	0.250	0.500	4,130	1,660	6,400
CCF-XDY32S	1.000	0.313	0.625	6,120	2,225	4,800
CCF-XDY40S	1.250	0.375	0.750	8,500	3,930	3,100

Self-lubricating cam follower provides continuous, dependable lubrication for the life of the unit. Heat-treated steel roller with machined lubrication reservoirs are pre-filled with specially developed lube mixtures. Lubrication penetrates through a porous inner sintered bronze bushing by capillary action. Particularly well suited for applications with light to moderate loads operating at medium to higher speeds. Frequently used in food processing, farm and construction, machine tools, metal-working and packaging. Can be used in high humidity applications, or where equipment is subject to frequent "wash downs".

- Bronze bushing bearing
- Reduces maintenance costs due to simplified design
- Interchangeable with standard types of needle roller bearings
- Ambient temperature of +40 degrees Fahrenheit to +150 degrees Fahrenheit

Load Factor Information	
rpm	Unit Load psi
Slow and Intermittent	4,000 Lbs.
150 to 300 rpm	2,000 Lbs.
300 to 600 rpm	600 Lbs.
600 to 900 rpm	400 Lbs.
900 to 1,200 rpm	300 Lbs.

Example:
NCF-40 Cam Follower at 800 rpm =
.391 (load factor) x 400 Lbs. = 156.4 Lbs. Capacity

Stud Type Cam Follower Regular Duty - Steel Standard Crowned Hexed & Sealed

Recommended where variations in dimensions of alignment of the tracks or cam might cause excessive angular loading. It reduces thrust on the rollers and wear and aids reliability.

TRACK ROLLER ASSEMBLIES & ACCESSORIES

The RBC Roller® was developed for customers needing a high degree of assurance of long cam follower life. The design incorporates two paths of cylindrical rollers that offer stable outer ring support. With the increased size of the rollers, the RBC Roller® has increased dynamic capacity and fatigue life offering at least twice, and up to five times the fatigue life of the conventional needle roller bearing cam followers. Contacting lip seals are a standard feature of the RBC Roller®. These seals provide positive exclusion of solid and liquid contaminants, and excellent lubricant retention. With large grease storage and the contacting lip seals the RBC Roller® is a true maintenance free cam follower. The RBC Roller® also offers higher speed capacity than the needle roller bearing cam follower and is interchangeable.

Long Life Cam Followers

Concentric Stud

Eccentric Stud

Eccentric Stud MadeWell Crown Roller

DualVee® integral guide wheels feature a one-piece bushing or stud shaft with a machined inner bearing race in lieu of a two-piece assembly, providing a lower procurement and installation cost. The unique one-piece design provides a lower profile and increased rigidity (up to 84% less deflection), less tolerance stack up, greater torque capability, and external adjustment. Integral wheels are available in 52100 carbon steel and polymer overmoulded. Like original DualVee® wheels, integral wheels are ideal for a wide array of applications from the clean room to the saw mill. These rugged, yet economical, guide wheels provide smooth, quiet motion at speeds up to 5.5 m/s and acceleration to 5 g's. The recirculating elements are self-contained and isolated from the environment; rolling contact between the wheel and track sweeps debris aside, making it ideal for use in contaminated environments. Track is easily joined for long length systems.

Integral Studded DualVee® Wheels

Wheels

Eccentric Bushing

Concentric Bushing

Track

The DualVee® product line offers customers easy to use and easy to install guide wheel components and assemblies. DualVee® components are ideal for a wide array of applications, from the clean room to the saw mill. These rugged, yet economical, guide wheels provide smooth, quiet motion at speeds up to 5.5 m/s and acceleration to 5 g's. The recirculating elements are self-contained and isolated from the environment; rolling contact between the wheel and track, sweeps debris aside making it ideal for use in contaminated environments. Track is easily joined for long length systems. Standard wheels are available in 52100 carbon steel or 440C stainless steel. Eccentric or concentric bushings are 303 stainless or nickel plated carbon steel. Alternatively, integral one-piece wheels can be selected for lower cost and ease of installation. Matching track is cold formed and hardened and polished on the running surfaces. Track is available in AISI 1045 steel hardened to 53 Rc or AISI 420 stainless hardened to 40 Rc. All parts are sold separately.

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Mini Rail Self-Lubricating Miniature Systems

Rail and Carriage Assembly

Carriage

Low profile, self-lubricating linear guide system with one piece carriage design. Excellent alternative to linear ball bearing systems. Precision series made from a RC70 ceramic coated rail with self-lubricating FrelonGOLD®. Commercial series made from a clear anodized rail with FrelonJ. Dampens vibration and tolerates shock loads. Will not rust. No metal-to-metal contact. No balls or rolling elements to trap contamination, skid or damage the rail. Operation is consistent, smooth and quiet. Maintenance free. Used in packaging machines, medical equipment, wash-down and harsh environments, etc. Carriage and rail sold together. Dimensions are in millimeters. Carriages also sold separately below.

Rails - Carriages Included

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Sleeve Bearing Sliding Assemblies

Two piece linear rail systems use Pacific Bearing's FrelonGold® plain bearing technology. Rail and carriage are made from 6063-T6 aluminum. Rails are ceramic coated to resist corrosion, repel weld spatter and contaminants. Smooth running and dampens vibrations. Guide has slots for T-nuts or bolts. Two component system allows for easier installation than traditional rail systems. Guide and rail are sold together.

We Have Production Machinery Parts For Any Industry

We work with many suppliers to give you solutions to fit your budget.

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Thomson Steel Shaft Rail Assemblies

Pre-drilled shafting mounts easily to pre-drilled support rails. For use with open style bearings and pillow blocks. All holes are drilled and tapped to the center of the shaft. Rails provide support over the entire length of the shaft. All supporting rails are made from aluminum alloy. 24 inch lengths. The assemblies include the shaft already mounted on the rail for easy installation.

Linear Shaft Assemblies Aluminum - Ceramic Coated

Made from 6061-T6 aluminum with a ceramic coating to MIL-8625. The one piece integrated design eliminates assembly time. Weld spatter, paints and other contaminants will not stick to the shaft. Vibration resistant and non-magnetic. This shafting should not be used in harsh wash down environments or with ball bearings. Class "L" tolerance.

Features a high load capacity. Approved for direct food contact in applications where animal fat or food approved lubricants are present. Bearing requires lubrication, but offers a middle ground coefficient of friction between ball bushing, composite/self-lubricating bearings and injection molded plastics. Coefficient of friction is .04 to .08. Dampens vibration for quiet and smooth operation - no metal to metal contact. Pillow blocks allow 360° misalignment of 1° from shaft centerline and 2° total misalignment of applications where proper alignment is difficult or self-alignment desirable. Bearing is able to withstand rapid oscillation, contamination, shock/vibration, wash downs, submersion and shaft brinelling. Works in less than ideal conditions such as granite polishing/cutting, glass cutting and abrasive polishing machinery. Minimum shaft hardness is RC35. Temperature range is -200°F to +440°F. The max. static psi is 5,000. The max. PV is 40,000.

Thomson 60 Case® LinearRace® Steel Metric

Thomson's 60 Case® LinearRace® shafts are precision ground to exacting standards for superior linear bearing performance and life. Case hardened to 60-65C. Roundness is 80 millionth of an inch. Surface finish 12 Ra micro inch.

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Thomson's 60 Case® LinearRace® shafts are precision ground to exacting standards for superior linear bearing performance and life. Case hardened to 60-65C. Stainless steel for corrosion resistance, is 440C with a hardness of 50-55C. Chrome plated steel for corrosion resistance. The ends are not plated. Roundness is 80 millionth of an inch. Surface finish 12 Ra micro inch.

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Economical weight saving alternative to traditional steel shafting. Made from 6061-T6 aluminum with a ceramic-coated finish that has a Rockwell hardness of 70C. Surface is non-magnetic and vibration resistant. Weld splatter, paints and contaminants will not stick. Shafting is designed to be used with the Simplicity FrelonGOLD® lined linear bearings. Note: Do not use with ball bearings. Pre-drilled and tapped shafting is interchangeable with standard pre-drilled shafting. Ends of shafting are not coated.

Solid, Pre-drilled, and Tapped Ceramic Coated Aluminum Shafts

Thomson Pre-Drilled Shaft Support Rails

Pre-drilled shafting mounts easily to pre-drilled support rails. For use with open style bearings and pillow blocks. All holes are drilled and tapped to the center of the shaft. Rails provide support over the entire length of the shaft. All supporting rails are made from aluminum alloy. The assemblies include the shaft already mounted on the rail for easy installation.

SLEEVE BEARING SLIDE ASSEMBLIES & ACCESSORIES

Sleeve Bearings - Inch & Metric

Pacific Bearing's plane bearing technology offers many design advantages over roller ball bearings. Some of these advantages include:

- Self-lubricating which requires no external lubricant
- Embeddability of hard particulate eliminates galling and shaft damage
- Dampens vibration for quiet and smooth operation - no metal to metal contact
- High load capacity allows for more compact design
- Shock loads are absorbed without damage to components
- Maintenance free with a reliable, predictable life that will not catastrophically fail
- High temperature range (-400 to +500 degrees Fahrenheit and chemically inert)

The plane bearing liner is made of FrelonGOLD®, a compound PTFE. The interaction of the FrelonGOLD® material and the shafting creates a natural, microscopic transfer process of the FrelonGOLD to the running surfaces. The valleys in the surface finish are filled in with FrelonGOLD® during the initial break-in period. This creates the self-lubricating condition. A minimum of initial lubrication is recommended to aid in cleaning the shaft for a proper transfer process. Chrome plated shafting is not recommended. The compensated styles below, offer additional running clearance. The bearing shell is 6061-T6 aluminum with anodized finish.

Sleeve Bearings
Stainless Steel
FDA/USDA Compliant

Closed Style

Open Style

Stainless steel shell features FDA/USDA compliant, self-lubricating PTFE composite liner. Bearings are direct drop-in replacements for inch size linear ball bushings. Designed to run on soft 300 series shafting. Minimum shaft hardness is RB25. Ideal for drug/food processing equipment and packaging equipment where direct contact would be a factor. Bearing is unaffected by wash downs, contamination or submersion. Coefficient of friction is .12 to .20. Temperature range is -400 to +375 degree Fahrenheit. The max. static psi is 1,000. Max. SFM without any load is 400. PV max. is 10,000.

Self-Lubricating Metal Backed Bearings

Fiberglide® bearings are designed to carry higher loads with improved wear life. Fiberglide® bearings are unique in their ability to resist cold flow under extremely high load because the monofilament fibers have a tensile strength approximately 25 times greater than straight PTFE resins. Fiberglide® bearings are completely self-lubricating and normally run dry. Operating Fiberglide® bearings are recommended where low surface speeds are combined with high loads.

SAE 841 Bronze - Oil Impregnated

These "Oilite type" self lubricating sintered bronze stock bearings have long conformed to ASTM chemical and physical properties, and are the first to include all ASTM standard sizes to all ASTM recommended dimensions and tolerances. After forming, sintering and sizing, the bearings are vacuum impregnated with SAE30 oil that provides lubricant which is metered from the bearing to the shaft during rotation. They will function satisfactorily in temperature ranges of 10 to 220 degrees Fahrenheit. Max P = 2,000, Max V=1,200 and Max PV = 50,000. Ideal for all applications where repeat lubrication is difficult, including all agricultural and industrial machinery and equipment.

Cast Bronze Sleeve Bearings

These cast bronze bearings are machined from continuous cast C93200 (SAE660) bronze for superior quality and performance. The continuous casting process assures a uniform bronze structure throughout the bearing, free from porosity and hard particle inclusions commonly found in other cast processes. These solid bearings are ideal in heavy load applications. Max P = 4,000, Max V = 750 with a Max PV = 75,000. Commonly used in all kinds of agricultural and industrial machinery and equipment.

Square Sleeve Bearings

Two Sided Adjustable

Four Sided Adjustable

These square bearings maintain radial integrity and can eliminate the need for parallel shafting. The bearings are made from 6061-T6 aluminum with anodized finish. Equipped with bearing plugs that run on a single square shaft, eliminating costly components. The threaded adjustable bearing plugs are made from 316 stainless steel with self-lubricating Frelon® wear pads and are designed to run on the stainless shafting shown below.

DOVETAIL SLIDES & POSITIONING STAGES

Dovetail Slides

Dovetail slides are used for work feeders for production milling, positioning fixtures, work holding devices, checking fixtures, shuttle devices, assembly equipment, etc. They are made of continuous cast G2 40,000 psi pearlitic grey iron. This material may be milled, drilled, tapped, etc., for altering or mounting purposes. Tapered gibs are adjusted with a single screw that moves the gib on the taper. This type of gib remains parallel and wear is less as it occurs over the entire surface. Accuracy is .001" in 12" of travel. Lubrication is provided with ball detent oilers.

Type F

Positioning Stages - used for gauging and positioning light and medium loads. Applications include measuring instruments and optical assemblies. Spring loaded micrometer drives allow precise repeatable adjustments with low friction and zero backlash. Slides provide repeatability of .0001 inch. Ball slides provide accuracy to .0005/inch of travel, crossed roller slides .0001/inch of travel. Positioning slides can be stacked for multi axis applications. Preloaded positioning slides fully assembled and arrive ready to use. Black anodized finish.

MECHANICAL SPRINGS & ACCESSORIES

Die Springs

Medium Duty

Medium Heavy Duty

Heavy Duty

Extra Heavy Duty

Pressure	Color	Maximum Deflection as a Percent of Length	Efficient Operating Range as Percent of Length
Medium Duty	Blue	50%	25% to 40%
Medium Heavy Duty	Red	37%	20% to 30%
Heavy Duty	Gold	30%	15% to 25%
Extra Heavy Duty	Green	25%	15% to 20%

Made from vapor degassed high tensile strength chromium alloy steels. Spring ends are ground square. Designed for long life cycle with constant high-speed deflections and shot peened to increase fatigue life. Load A is the load at 1/10 inch deflection. Load B is the load at maximum operating deflection which is 40% for medium duty, 30% for medium-heavy duty, 25% for heavy duty and 20% for extra heavy duty.

MECHANICAL SPRINGS & ACCESSORIES

Chrome Silicon Die Springs

Medium Duty

Medium Heavy Duty

Heavy Duty

Pressure	Color	Maximum Deflection as a Percent of Length	Efficient Operating Range as Percent of Length
Medium	Blue	50%	25% to 35%
Medium Heavy	Red	37%	20% to 25%
EHeavy	Gold	25%	15% to 20%

Chrome silicon die springs are longer lasting than high carbon steel. Shot peened to reduce working stress and to improve the surface. Available in medium, medium-heavy, and heavy pressure styles. Color coded for easy identification.

Open End Compression Springs

Long length compression springs can be cut to create a custom length spring. End coils may be bent back to touch the previous coil to create a squared end. Available in 20" long stainless steel or 36" long carbon steel. The constant divided by the number of coils equals the load rate per inch.

MECHANICAL SPRINGS & ACCESSORIES

Conical Compression Springs - Tapered

Cone Shapes Type 302 stainless steel. Coils can be designed to nest within each other when deflected, providing a nearly constant rate, and a solid height lower than a normal compression setting. Ends are closed. Starting rate is the same rate per inch.

MECHANICAL SPRINGS & ACCESSORIES

Torsion Springs Stainless Steel

Widely used to store and release energy of rotation or to maintain a pressure over a short distance. Normally used over a supporting mandrel or arbor. The suggested mandrel sizes below allow about 10% clearance at the deflection listed. Sufficient room (minimum axial space) must be provided in the assembly for the spring to function properly. These springs should be used in the direction that winds the coils. Torque values listed are recommended maximum torques. For inspection purposes, the load should be applied at 1/2 leg length (A). These values can be increased 20% for static conditions with only slight setting. Type 302 stainless, plain finish. (ASTM-A313 or AMS-5688).

Spring Anchors

Spring anchors offer an economical way to secure the ends of extension springs, and provide easy adjustments. Available in C-12114 steel with a black oxide finish or 300 series stainless steel.

Wire Drawbar Springs

STAINLESS STEEL
OPTION AVAILABLE

Drawbar springs have long steel loops that pass through the center of the spring and hook around to opposite end, thus compressing the spring upon loading. The design products physical extension stops to prevent unexpected overloading and fracturing while continuing to hold a static load. Available in zinc plated spring steel or stainless steel. The rate lbs./in. listed below indicated the pounds needed to pull out the first inch of the spring. For example, if the rate is 25 lbs. to pull out the first inch, 50 lbs. for the second inch, etc.

Rates Lbs./Inch	Max. Deflection	Max. Load Lbs.	Lgth.	Dia	Item No.

NOBODY WILL SERVE THE **CUSTOMER BETTER.**

Solid Compression Springs

Neoprene elastomer springs have proven to be the safest, most efficient and reliable compression material for punching, stamping and drawing dies. Major advantages include higher loads increased durability, better performance, no maintenance and very long life.

Note: R = Spring rate, lb. inch deflection +/- 20%
 D = Max. recommended deflection - 35% L
 T = Approximate total load at max. deflection +/- 20%

Solid Compression Springs

These urethane springs are designed for use in applications where corrosion, vibration and magnetism prevent the use of conventional steel springs. They replace steel coil springs in medium pressure applications involving space limitations, high blank holding pressure and adequate stripping. Durometer 95 shore A. Color black. Tensile strength 5,000 psi. Temperature range -40 to +180 degrees Fahrenheit.

MECHANICAL SPRINGS & ACCESSORIES

Constant-Force Springs Stainless Steel

Well suited to long extensions with no load build up. The spring is usually mounted with the ID tightly wrapped on a drum and the free end attached to a loading force such as a counterbalance. Load capacity can be multiplied by using two or more strips in tandem, back to back or laminated. In use, be sure to leave at least 1 1/2" coiled on the drum at full extension. The spring ID will wrap tightly on the drum so that most applications require no fastening on the drum. Made from Type 301 stainless steel.

MECHANICAL SPRINGS & ACCESSORIES

Bumpers

Elastomer Bumpers

Elastomer bumpers provide excellent resistance to chemicals and humidity. Durability is 20 times greater than urethane, 10 times greater than rubber and 500 times greater than coiled steel springs. Maintains excellent resilience at extreme temperatures and remains flexible with no material degradation between -80 and +300 degree Fahrenheit. Other sizes and colors available as special order. Please call for price and delivery. Mounting screws not included.

Spring Winders

The Porter Spring Winder quickly winds extension, compression and torsion springs from 1/8" to 1 1/4" inside diameter in either right or left hand coils. Handles music wire from smallest to 3/16" diameter. A pitch gauge accurately regulates distance between coils and may be disengaged while winding extension springs or closed end coils on compression springs.

SW-101 Spring Winder Kit: Includes spring winder with cam lock tension release, two handles, one for large diameter and one for small diameter mandrels. Six mandrels, 1/8", 1/4", 3/8", 1/2", 5/8", and 3/4" wrench, four 1/4 lb. coils of .029", .047", .067" and .085" spring wire. Also includes Hook-Kon spring looping tool and nipper.

SW-102 Spring Winder Kit: Same as above but does not include Hook-Kon spring looping tool and nipper.

SW-103 Utility Model: Same as SW-102 but it does not have cam lock tension release or small handle. Shipped complete with four mandrels only. Sizes include: 1/8", 1/4", 3/8" and 1/2" with wrench. Spring wire not included.

MECHANICAL SPRINGS & ACCESSORIES

Snap Buttons

Fasteners for telescoping tubing help reduce assembly time while improving your product. Eliminates the need for rivets and screws. Quickly snap into place in round or square tubing. Snap buttons are made from 1050 spring steel, heat treated and .0002" zinc plated minimum.

GAS/AIR SPRINGS, SHOCK ABSORBERS & ACCESSORIES

Fixed Force Gas Springs

Patented multi-lobe seal significantly reduces gas leakage, tolerates shaft imperfections, vibrations and wide temperature variations. Body is made of heavy gauge steel and shaft is chromium plated steel. All have M6 x 1.0 threads.

Length including end fittings (center to center)

Adjustable Force Gas Springs

These adjustable gas springs are the perfect solution for small volume design or replacement applications, as the need to calculate the exact force required is eliminated. Each gas spring is charged at the factory to its maximum force value. Once installed in an application, a simple allen key (included) adjustment can be made to reduce the gas spring force, until the desired application function is reached. Manufactured from specially designed seals, nitrotec finished rods and powder epoxy paint finished tubes for maximum life and service. To order a complete gas spring, select a spring from the table below, then specify which end fittings you need. (Two end fittings per gas spring.)

Item No.	A	Cyl. Dia. B	Stroke C	D	E	Supplied Force Lbs.	Thread Size
GAS-1	.23	.59	2.36	3.94	6.30	90	M5 x .8

GAS-7	.39	.91	11.81	13.39	25.20	270	M8 x 1.25

Econoloc Gas Springs

Econoloc gas springs eliminate the need for separate safety rods in critical lift-assist applications. They automatically lock when fully extended, protecting the operator from potential injury in the unlikely event of gas spring failure through overload or misuse. The Econoloc is manually released by applying thumb pressure to the designated area of the locking shroud, allowing the gas spring to compress in a controlled manner. A single Econoloc gas spring can be used in conjunction with GAS-3, 4, and 5 listed above.

Item No.	A	Cyl. Dia. B	Stroke C	D	E	Supplied Force Lbs.	Thread Size

Determine load weight, impact velocity (in./sec.), propelling force (if any), cycles per hour, and stroke (in.) required. Calculate total energy (in.-lbs.) and total energy per hour (in.-lbs./hr) to select proper shock.

Small Adjustable Hydraulic Series

ED-1, ED-2R

ED-3, ED-4

Use with pallet stops, air cylinders, rolling doors, and other various manufacturing applications. Standard corrosion resistant nickel plating. Adjustments are made by turning the 180 degree adjustment knob. Adjustments are locked with a setscrew. One hex jam nut supplied with each shock. Additional mounting accessories are available below.

Adjustable Double Acting Hydraulic Series

Used in food processing, refrigeration cases, material handling, air cylinders and various other manufacturing applications. Determine required stroke (in.) control direction desired (compression, tension or both) and maximum propelling force in the desired direction to select appropriate shock absorber. Dampening force adjustments are made by rotating adjustment knob 180 degrees. Bore size is .625".

*Free flow in tension mode, adjustable in compression mode

Soft Contact/Self-Compensating

Soft contact is suggested when a low initial reaction force is required at impact. Self-compensating is utilized to obtain maximum energy absorption capacity. Both are recommended when a range of loads and impact velocities are encountered in the same application. Temperature range 32 to 150 degree Fahrenheit. Oil type ACE #5.

GAS/AIR SPRINGS, SHOCK ABSORBERS & ACCESSORIES

These shock absorbers are fully threaded for ease of installation. Outer body made of steel with black oxide finish. Piston rod is made of high tensile steel, hardened and chrome plated. Rod end button is made of hardened steel with black oxide finish. Return spring is zinc plated. For maximum heat dissipation, do not paint shock absorber. Operating temperature is 10 degrees to 158 degrees Fahrenheit. Oil type is ATF. Lock nut included with each shock absorber.

Self-Compensating

Used to obtain maximum energy absorption capacity. Impact velocity range is 0.5 to 16.5 ft./sec.

Adjustable

Adjustable from either front or rear. Impact velocity range is 0.5 to 16.5 ft./sec.

Low Velocity Adjustable

Adjustable from either front or rear. Impact velocity range is 0.6 to 1.5 ft./sec.

GAS/AIR SPRINGS, SHOCK ABSORBERS & ACCESSORIES

Self-Compensating

ACE-1150 - 1602, 1010, 1011, 1005M - 1601M

ACE-1024 - 1075

Small size allows for high energy absorption in confined spaces. The self-compensating design accommodates a variety of load conditions. Threaded outer bodies. Temperature range 32-150 degree Fahrenheit. Not compatible with petroleum based fluids. Silicone type oil.

Self-Compensating Hydraulic Series

Used with medical equipment, packaging machinery, air cylinders, turnstiles, and various other manufacturing applications. Standard corrosion resistant nickel plating. One hex jam nut included. Additional mounting accessories are available below. All have hydraulic stop at full stroke, therefore it is important to position the shock absorber such that full stroke is used to prevent undesirable bottoming against the positive stop.

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Shell Type Needle Roller Bearings

Shell type needle roller bearings are lightweight with the lowest sectional height among needle roller bearings with outer ring, because they employ a shell type outer ring made from a thin special-steel plate which is accurately drawn, carburized and quenched.

Shell Type Needle Roller Bearings

Shell type needle roller bearings are lightweight with the lowest sectional height among needle roller bearings with outer ring, because they employ a shell type outer ring made from a thin special-steel plate which is accurately drawn, carburized and quenched.

IKO Series TLA UU Metric

Bearing

Series TLA UU are metric standard series of shell type needle roller bearings with cages, rollers and double seals.

POWER TRANSMISSION & ACCESSORIES

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Dynaroll Standard and Standard Extended Inner Rings Inch

Bearings are made of 440C stainless steel and are corrosion, fatigue and wear resistant. Temperature range is -70 degrees Fahrenheit to 350 degrees Fahrenheit. Bearings have steel shields. Applications include idler pulleys, small gear trains, pumps tape guides, synchros and servos. These bearings meet or exceed ABEC 5 tolerances. Radial clearance is .0002/.0005". All extended inner ring bearings are .031" wider than C dimension on inner ring.

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Nice® Ball Bearings

Double Sealed

Double Shield

Precision ground on all contact surfaces. Careful heat treatment provides a uniform and exact degree of hardness for maximum life. A ball retainer is used to increase the range of allowable speeds by reducing ball-to-ball contact friction. Bearings are supplied grease packed. Recommended for medium loads and for maximum speeds in the range of 5,000 rpm. ID and OD tolerances are $\pm 0.000/-0.005$ ". Width tolerance is $\pm 0.000/-0.005$ ".

Semi-ground Radial Bearings

Precision ground on all contact surfaces except bore. A ball retainer, or separator, is employed to increase the range of allowable speeds by reducing ball contact friction. This series of radial bearing is available open, double shielded or double sealed. The double shielded and double sealed bearings are grease packed as standard. Recommended for lighter loads and maximum speeds in the range of 3,000 rpm. ID tolerance is $\pm 0.005/-0.000$, OD tolerance is $\pm 0.0000/-0.0005$ and width tolerance is $\pm 0.0000/-0.005$.

1600 Series Inch

Designed to be dimensionally interchangeable with standard domestic inch series bearings. By using 52100 steel and holding dimensions to ABEC 1 tolerances, this series offers economy with electric motor quality. Close tolerance and improved ball complement allow an increased load capacity. This series is available with shields and seals. Metric dimensions are in millimeters.

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Precision ground on all contact surfaces. Recommended for applications requiring the accuracy of rotation and quiet performance of close tolerance precision grab bearings, and where superior seal is required to retain lubricant and keep the bearing free from dust and dirt. Double sealed bearings are greased packed as standard. Nylon cage design. Use for medium loads and for maximum speeds in the range of 6,000 rpm. ID and OD tolerance area is $+.0000/-0.0005$ ". Width tolerance is $+.000/-0.005$ ".

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Deep Groove 6200 Series Metric

This deep groove, conrad construction is specifically designed to provide maximum performance by means of precise ball complement selection. The honed raceways offer a perfectly balanced bearing capable of operating under straight radial, thrust or combination loads. This series is available with shields, Buna N seals, or locating rings. Sealed bearings may be obtained with either low or high starting torques. Radial clearance is selected in accordance to applications ranging from C2 - C0 - C3 - C4 fits. Metric dimensions are in millimeters.

ER Bearings

ER Series ball bearings, an industry standard, are used in demanding applications such as: cardboard/packing machinery, paper/printing machinery, carpet tufting machinery, general conveying equipment, pumps, blowers. These bearings feature exclusive heavy duty "DL" seals which are permanently sealed and prelubricated for long life. "DL" seals feature a steel trash guard combined with the inner ring labyrinth groove provide superior protection in wet/moist environments. These bearings come with two lubrication holes for regreasing, two knurled cup point set screws set 120 degrees apart offer excellent resistance to loosening under vibratory conditions. They are made of fully ground, SAE 52100 chrome alloy steel races featuring a black oxide finish for added corrosion resistance and are available with low-torque seals (SFR).

Deep Groove Ball Bearings Single Row For Electric Motors

Single row deep groove ball bearings have deep uninterrupted raceways and a high degree of conformity between balls and raceways. This enables them to carry axial loads in both directions, in addition to radial loads, even at high speeds. Bearings with shields or seals at both sides are filled with a grease which has good rust inhibiting properties suitable of operating temperatures of -22 to +230 degrees Fahrenheit. All bearings have a pressed cage of sheet steel and are available either plain, shields on both sides (2 Z), or two rubber seals on both sides (2 RS). All dimensions are in millimeters.

Stainless Steel Bearings Inch and Metric

These stainless steel bearings are semi-precision unground type. The 316 type stainless bearings are ideal for hostile environments and wash down applications where the load is too heavy for plastic bearings. Type 316 stainless is non-magnetic and can be run without lubrication at slow speeds. Type 316 stainless provides greater corrosion resistance over 440 type stainless. Cage is made of a polymer. Metric dimensions are in millimeters.

ROLLER BEARINGS, BALL BEARINGS & ACCESSORIES

Silverthin™ Bearings
Type X Four Point Contact
Brass Snapover Separator Standard

The Silverthin™ series are manufactured to industry standard sizes. The bearing widths and sections (distance from bore to outside diameter) in each series remain constant regardless of the change in bore diameter.

CCF-1175	8	8½	⅝	1,071	2,670	4,441	3,370	8,434	14,025	250

Note: For bearings with ¼ inch widths, the maximum shaft or housing fillet radius that the bearing corners will clear is .025 inch. Bearings with ⅝ inch widths will clear .040 inch.

Plastic Bearings
Inch and Metric

These plastic bearings are corrosion resistant, lightweight and offer a great deal of design flexibility. The rings are delrin, ball retainer is chemical resistant polymer, and the balls are 316 stainless, providing a lube free operation where other bearings wouldn't hold up.

These mounted bearings are used extensively in fabricated equipment because they are easy to fit, maintain and replace. They are sealed and pre-greased, and under normal conditions require no further lubrications (grease fitting is supplied for additional lubrication under adverse conditions.) Housing is made from cast iron. All bearings below have set screw shaft locking.

Thermoplastic housed units offer a more favorable economic choice. Available with either stainless inserts, for a higher level of corrosion resistance, or hard chrome coated inserts, where intermediate level corrosion resistance, balanced with further savings, is desired.

Thermoplastic housings are off-white in color and are made from glass reinforced PBT resin. These units offer favorable chemical resistance, are very resistant to moisture absorption and have excellent mechanical, thermal and electrical properties. Operating ranges for thermoplastic housed units are from -10 degrees Fahrenheit to 210 degrees Fahrenheit.

All thermoplastic housings are made with extremely smooth surfaces, have solid bases and all sleeves, bushings and grease fittings are made from 300 series stainless steel.

Standard duty, high-grade cast iron. Solid foot housing design. Wide inner ring bearing. Relubricatable unit with anti-rotation pin.

These mounted bearings are used extensively in fabricated equipment because they are easy to fit, maintain and replace. They are sealed and pre-greased, and under normal conditions require no further lubrications (grease fitting is supplied for additional lubrication under adverse conditions.) Housing is made from cast iron. All bearings below have set screw shaft locking.

MOUNTED BEARINGS

Full stainless bearing units are the most common solution for hostile chemical wash down applications. All metal bearing insert components are 302, 304, or 440 stainless steel, have silicone rubber seals, utilize H-1 food grade grease and have an operating temperature range of -10° F to 250° F.

The solid 304 stainless housings have a fully machined base and an extremely smooth surface finish, essential for demanding wash down installations. These housings do not experience flaking, cracking, deformation or discoloration and are virtually unaffected by scrapes.

These bearings are self-aligning, maintenance free and made of high performance polymer. Dust, dirt, corrosion and chemical resistant. Vibration dampening capacity. Compensate for misalignment and edge loads. Lightweight and easy to install. Self-lubricating oil-free operation. Operates in temperatures from -40 degrees Fahrenheit to +275 degrees Fahrenheit. Dimensions are in millimeters.

MOUNTED BEARINGS

Thermoplastic housed units offer a more favorable economic choice. Available with either stainless inserts, for a higher level of corrosion resistance, or hard chrome coated inserts, where intermediate level corrosion resistance, balanced with further savings, is desired.

Thermoplastic housings are off-white in color and are made from glass reinforced PBT resin. These units offer favorable chemical resistance, are very resistant to moisture absorption and have excellent mechanical, thermal and electrical properties. Operating ranges for thermoplastic housed units are from -10 degrees Fahrenheit to 210 degrees Fahrenheit.

All thermoplastic housings are made with extremely smooth surfaces, have solid bases and all sleeves, bushings and grease fittings are made from 300 series stainless steel.

MOUNTED BEARINGS

Full stainless bearing units are the most common solution for hostile chemical wash down applications. All metal bearing insert components are 302, 304, or 440 stainless steel, have silicone rubber seals, utilize H-1 food grade grease and have an operating temperature range of -10 degrees Fahrenheit to 250 degrees Fahrenheit.

The solid 304 stainless housings have a fully machined base and an extremely smooth surface finish, essential for demanding wash down installations. These housings do not experience flaking, cracking, deformation or discoloration and are virtually unaffected by scrapes.

MOUNTED BEARINGS

These mounted bearings are used extensively in fabricating equipment because they are easy to fit, maintain and replace. Made of cast iron housings with a grease fitting for easy lubrication. Pillow block style comes in two types, standard height and low center height.

Thermoplastic housed units offer a more favorable economic choice. Available with either stainless inserts, for a higher level of corrosion resistance, or hard chrome coated inserts, where intermediate level corrosion resistance, balanced with further savings, is desired.

Thermoplastic housings are off-white in color and are made from glass reinforced PBT resin. These units offer favorable chemical resistance, are very resistant to moisture absorption and have excellent mechanical, thermal and electrical properties. Operating ranges for thermoplastic housed units are from -10 degrees Fahrenheit to 210 degrees Fahrenheit.

All thermoplastic housings are made with extremely smooth surfaces, have solid bases and all sleeves, bushings and grease fittings are made from 300 series stainless steel.

THRUST & TURNTABLE BEARINGS

Unground Thrust Bearings

Unground thrust bearings are designed for moderate speeds and medium thrust loads. These bearings utilize a full ball complement. The upper ring is free to rotate in the band and has a close fit in the bore for the shaft. The lower ring is fixed in the band and has a shaft clearance in the bore. Recommended for maximum speeds in the range of 1,200 rpm.

Cylindrical Rollers

Cylindrical roller thrust bearings have a comparatively large contact area between the roller and raceway. They can support greater loads and accommodate much more shock than ball thrust bearings of a similar size. Cylindrical roller thrust bearings are suitable for medium to heavy-duty applications with high thrust loads and low operating coefficient of friction requirements. The .032" thrust washer is punched from steel, through hardened and polished. These washers should be fully supported on their entire abutment surface. The .126" thrust washers are made from bearing steel. The raceways are ground while the bore and outside diameter are machined. Washers sold separately from bearings.

Note: For oil lubrication use 25 percent of value with grease lubrication.

THRUST & TURNTABLE BEARINGS

Nylon Ball Retainers

This new concept in thrust bearings provides superior performance and economical characteristics. The unique design of the molded nylon retainer captures the balls in precision molded pockets assuring smooth free turning and quiet operation. The nylon retainer is lightweight, provides natural lubricity and is corrosion resistant. Balls are precision grade 100 tolerance +/- .0001, +/- .0025mm. The thrust washers are hardened steel providing high strength to wear ratio for long life. Available with steel or stainless steel balls. Washers are included with bearing.

Self-Lubricating Metal Backed Thrust Washers

Fiberglide® series thrust bearings offer an economical approach to obtaining self-lubrication where high loads are encountered. They are comprised of zinc-plated mild steel with Fiberglide laminated to one face. These bearings are recommended for use where metal backing is preferred. These bearings are self-lubricating and tolerate a compressive strength of 38,000 psi with operating temperature range of -320 degrees Fahrenheit to 300 degrees Fahrenheit. Coefficient of friction can be obtained as low as 0.03 with no added lubricants.

Turntable Bearings Lazy Susan

Used for turntables and fixtures of all kinds. 3/16" thick. Has a full race of precision ground ball bearings for smooth gliding rotation. Pre-assembled. Bearing is interlocked for life time of unit. Zinc coated steel. 9" and 12" round bearings are available greased.

Turntable Bearings: Lockable or Non-Lockable

Heavy duty turntables are ideal for swivel displays, welding tables, industrial assemblies and many other turntable applications. May be mounted using the recommended bolts or welded directly to the fixture. All sizes can be purchased as lockable or non-lockable units.

LinearLube is designed for use in bearing applications. It is 100% synthetic grease with concentrated PTFE particles. It will not volatilize or oxidize at high operating temperatures or form corrosive deposits. Contains no petroleum products. It is non-toxic (FDA listed and USDA rated H1, suitable for incidental contact with food or potable water) and non-polluting. No adverse effects on plastics. Operates effectively from -65 degree Fahrenheit to +450 degree Fahrenheit. 1 1/2 oz. tube.

Nylon sleeve and steel hubs allow high ambient temperature operation without lubrication, or maintenance. Continuous operating ambients of 180 degrees Fahrenheit with peak temperatures to 250 degrees Fahrenheit. Nylon sleeves resistant to dirt, moisture, most chemicals and petroleum products. Double crowned tooth design provides free axial movement. Low friction and minimum stress during misalignment. No bolts, pins, flanges or protrusions to affect balance or safety. Blind assembly with slip together components for easy inspection and adjustment without disassembly. Available with no bore (except centering pilot hole), bores and bores with keyways.

For complete coupling, order two hubs and one nylon sleeve of the same type.

Nylon Sleeves

Gear Grip

Neoprene and urethane rubber sleeve compounds provide excellent torsional vibration dampening, absorb load pulsations and minimize drive line shock. The load is distributed evenly over a wide splined contact area. Gear grip couplings handle shock, minimize assembly time, require no special tools and allow for "blind" assembly. Not affected by moisture, dirt and abrasives. No lubrication, adjustments or maintenance is required. Provides protection to the expensive drive train during extreme overload, jamming or high shock. Electrical isolation. No possibility of metal-to-metal contact under severe overload, wear or coupling failure. Parallel misalignment to .040 inches, except Type A, which is .016 inches. Angular misalignment to 7.5 degree maximum.

For complete coupling, order two hubs and one sleeve of the same size.

COUPLINGS, COLLARS & KEYED SHAFTS

Shaft Couplings Three Jaw Type

Complete with keyway and set screw. No lubrication needed. Bored to $+.001/-0.000$ " tolerances. Must order two coupling halves and one insert of same out side diameter for complete coupling. Insert types include: Bost-Bronz inserts for high torque loads, particularly at slower speeds, rubber for quietness particularly at motor speeds, polyurethane for moderate to heavy shock loads.

Machined aluminum hubs with 92 durometer "spiders". Designed for fractional and sub-fractional motors. Absorbs parallel and angular misalignment. Excellent shock dampening and vibration isolation. Cross clamping available for positive shaft lock. Stiffness is in pounds per inch radian. All bores larger than 1/2" have a 3/16" x 5/32" keyway.

Machinable Couplings Single Spit Black Oxide

Machinable couplings provide an affordable alternative to expensive set-up costs and special machining. The single split style couplings come with a variety of standard bore sizes on one end, and a pilot hole on the other that can be rebored to any diameter less than the opposing bore.

Hexagon Bore Clamp Type Collars
One-Piece or Two-Piece
Inch
Steel or Stainless Steel

STAINLESS STEEL
OPTION AVAILABLE

One-Piece

Two-Piece

Clamp-type shaft collars to fit hexagon shafts. One-piece and two-piece made of steel and stainless steel. They can be modified (drilled, tapped, welded, etc.) to act as a mount for other components. They are non-marring and have high holding power.

Hinged Shaft Collars

STAINLESS STEEL
OPTION AVAILABLE

Hinged construction and a captive clamp screw to simplify assembly. These fully split collars eliminate lost screws and downtime. Hinged collars provide the same axial load handling capabilities as our two piece collars. Both halves are machined from the same stock and then joined together by a heat-treated triple-link hinge. These collars have a smooth ID, OD, and sides with no protruding pins or screws. All steel shaft collars are made of 12L14 or mild steel with black finish.

Universal Joints

Standard industrial type universal joint with pin and block design. The special tapered shape of the yokes provide exceptional strength for long life while allowing full free movement of the joint. Boot retainer grooves are standard. Ideal for angles, degrees and speeds up to 1,750 rpm.

Polyurethane Bellows

Round

Rectangular

Strong, lightweight bellows are heat sealed to keep out moisture and contaminants. There are no stitches or glue that could fail. Color is black. They have high resistance to ozone, chemicals, gasoline, kerosene and most other aliphatic petroleum products, plus excellent resistance to ultraviolet and gamma rays. The bellows have high abrasion resistance and tensile strength. Temperature range is -60 to +225 degree Fahrenheit. Round thickness is .010". Round bellows have 1/2" cuffs that may be secured with standard hose clamps. Available in 12" and 24" extended lengths that compress to 1" and 2" respectively. Square/rectangular thickness is .020". Square bellows have square ends without cuffs and are available in 12" and 24" extended length that compresses to 1- 1/2" and 3" respectively.

INDUSTRIAL V-BELTS

Single Wedge Premium Notched V-Belts

Single wedge V-belts, 3VX and 5VX in raw edge notched construction give premium belt performance. The belts are constructed of highly engineered, high performance, oil and heat resistant components. The components are made using the latest in belt technology available on a global basis. The "X" in the part number refers to higher load ratings than standard wedge V-belts.

The belts exceed USA RMA published ratings levels. They are designed to perform at the identical or higher level than all other major USA manufacturer's belts of the same type. All 3VX and 5VX belts are manufactured to meet RMA standards for length, dimensions and matching. All belts of a given size are manufactured to run interchangeably in a matched set.

Single Classical V-Belts

Single classical V-belts, A, B, C and D in fabric wrapped construction give premium belt performance. The belts are constructed of highly engineered, high performance and heat resistant materials. The outer fabric wrap is treated with oil and heat resistant, engineered synthetic rubber coated compound, specifically compounded for excellent wear resistance, proven through thousands of hours of testing. The components are made using the latest in belt technology available on a global basis.

The belts exceed USA RMA published ratings levels. They are designed to perform at the identical or higher level than all other major USA manufacturer's belts of the same type. All A, B, C and D V-belts are manufactured to meet RMA standards for length, dimensions and matching. All belts of a given size are manufactured to run interchangeably in a matched set.

INDUSTRIAL V-BELTS

Single Wedge V-Belts

Single wedge V-belts, 3V, 5V and 8V in fabric wrapped construction give premium belt performance. The belts are constructed of highly engineered, high performance and heat resistant materials. The outer fabric wrap is treated with oil and heat resistant, engineered synthetic rubber coated compound, specifically compounded for excellent wear resistance, proven through thousands of hours of testing. The components are made using the latest in belt technology available on a global basis.

The belts exceed USA RMA published ratings levels. They are designed to perform at the identical or higher level than all other major USA manufacturer's belts of the same type. All 3V, 5V and 8V V-belts are manufactured to meet RMA standards for length, dimensions and matching. All belts of a given size are manufactured to run interchangeably in a matched set.

Single Fractional Horsepower V-Belts

Wrapped Construction: 3L and 4L cross sections in lengths from 13" to 73". Single FHP V-belts, 3L and 4L in fabric wrapped construction give consistent good performance. The belts are constructed of highly engineered, high performance and heat resistant materials. The outer fabric wrap is treated with oil and heat resistant, engineered synthetic rubber coated compound, specifically compounded for excellent wear resistance, proven through thousands of hours of testing. The components are made using the latest in belt technology available on a global basis. The FHP V-belts are designed for general use applications with lower horsepower requirements. Typical applications are laundry machines, home workshop tools, small fans and blowers, small metal and woodworking machines, garage equipment, portable farm tools and other general purpose, low horsepower uses. The belts should not be used as a clutch. The belts should not be used with backside idlers. All belts of a given size are manufactured to run interchangeably in a matched set. The numbering system is 3L=3/8" top width and 4L=1/2" top width. Belt length is the numbers following the L in inches and tenths of inches, for example a 4L400 V-belt has a 1/2" top width and outside length of 40 inches.

Belt Number Key (following "BTQ-")			
Type	Top Width	Thickness	Outside Length
3L	3/8 inch	7/32 inch	see table below
4L	1/2 inch	5/16 inch	see table below
Example: BTQ-3L130 = 3/8 inch top width, 7/32 inch thick and 13.0 inch appx. outside length.

IDC-123	B, C	1.31	7¼	½	2¾/32
IDC-124	B, C	1.31	7¼	¾	2¾/32

Flat Faced Idler Pulleys - Needle Bearing

Item No.	A	B	C	D	E	F	G	H	Approx. Weight (Lbs.)
IDC-127	4½	1¼	1	4	1¼	¼	1½	¼	3.00
IDC-128	4½	2¼	1	4	2¼	¼	3½	¼	4.60
IDC-129	4½	3¼	1	4	3¼	¼	3½	¼	5.80
IDC-130	7	5	1	6	4½	1¼	5½	¼	13.20

Adjustable Flange Tensioners

The adjustable flange tensioner has a flanged base that can be mounted in a tight area where space is limited. The rotating arm gives the operator 360 degree controlled tensioning and can be easily adjusted to the proper tension increasing the life of the drive. The adjustable flange tensioner has serrated teeth to prevent slippage. Idler shaft must be ordered separately.

Item No.	C	D	E	F	G	J	K	L	Approx. Weight (Lbs.)
IDC-62	1	1¼	1½	4	3	3	2	¾-10 x ¾	2.82
IDC-63	1	1¼	1½	4	3	3	2	¾-16 x ¾	2.82

Adjustable Angle Tensioners

The adjustable angle tensioner has an angled base that can be mounted on the top of a frame member. The angled base provides parallel tensioning with the drive. This tensioner has serrated teeth to prevent slippage. Idler shaft must be ordered separately.

Item No.	C	D	E	F	G	H	I	J	K	L	M	N	Approx. Weight (Lbs.)
IDC-67	1	1¼	1½	2	4	4	3	3	2	¾-16 x ¾	½	2½	3.15
IDC-69	1½	1¾	2¾	3½	7¾	7½	6	6½	5	1-14 x ¾	¾	5½	14.20

V-BELT PULLEYS, TENSIONERS & IDLER SHAFTS

Adjustable Screw Tensioners

The adjustable screw tensioner uses screw adjustment for positive precise tensioning. Can be easily mounted to any flat surface and a favorite for operators that need to make very fine adjustments. Idler shaft must be ordered separately.

Item No.	C	D	E	F	G	H	I	J	K	L	M	N	Approx. Weight (Lbs.)
IDC-82	1	2½	1½	9%	8%	¾	½	2%	1	¾-16 x ¾	4	2½	4.29

GEARS, GEAR-RACKS & DAMPERS

Boston Gear Spur Gears

14½ degree pressure angle gearing for transmitting motion and power between parallel shafts. All are steel except GE-1040, 1048 and 1248 which are cast iron. 32 and 24 pitch spur gears include a set screw. None include key ways. Bore tolerance is +/- .0005". Diameter tolerance is +/-1/32".

GEARS, GEAR-RACKS & DAMPERS

Rotary Dampers

For smooth mechanical motions. Used in VCR loading mechanisms, glovebox doors, window shades, copy machine lids or anywhere controlled rotary motion is needed. Two way damping controls the movement in both directions. Maximum cycle rate is 10 cycles per minute. Nominal torque ratings are measured at 20 RPM and 73 degrees Fahrenheit. Torque is affected by temperature. Calculate nominal torque using the formula shown.

$$T = (L/2) \times (W) \times (\cos \emptyset)$$

Where: T=Nominal Torque

L=Length from pivot to the end of the lid

Ø=The angle between the panel and horizontal

W=The free weight of the lid
